¹ Planted March 19, 2003 next to the Nampa Commercial Variety Trial; Plots were single row, 25 feet long. Data are the means of four replications, 100 seed/ replication.

² Days After Planting

³ The four locations are the Aberdeen, Jerome, Minidoka, and Nampa Variety Trial sites.

⁴ Percent doubles were determined using three replications of 100 seed each in laboratory germination tests. The same seedlots were subsampled for the field and laboratory tests. Percent doubles = [(# doubles)/(total # seed germinated)] x 100

When comparing two varieties, the values must differ by a value equal to or greater than the LSD (0.05) given at the bottom of each column to be considered significantly different in this test.
