Psyc 430: Tests and Measurements

Welcome!
Whether you are a new or returning student, welcome to the Independent Study in Idaho (ISI) program. Below, you will find information pertinent to your course including the course description, course materials, course objectives, as well as information about assignments, exams, and grading. If you have any questions or concerns, please contact the ISI office for clarification before beginning your course.

Policies and Procedures
Refer to the ISI website at www.uidaho.edu/isi and select Students for the most current policies and procedures, including information on setting up accounts, student confidentiality, exams, proctors, transcripts, course exchanges, refunds, academic integrity, library resources, and disability support and other services.

Course Description
Review of the major principles of test development including test construction and methods for determining test validity and reliability, some of the currently used scales, and study of scaling methods such as Thurstone scales, Likert scales, and semantic differentials. Prerequisites: Psyc 101. Recommended preparation: Stat 251 [Statistical Methods]

Required: Internet access, computer with word-processing software
Recommended: Microsoft Excel or other spreadsheet software
9 graded lessons, 6 self-study lessons, 4 proctored exams

Course Materials
Required Course Materials

Recommended Course Materials
Microsoft Office Excel is recommended.

Course Delivery
This course is available online. An electronic course guide is accessible through BbLearn at no additional cost. Refer to your Registration Confirmation Email for instructions on how to access BbLearn.

Course Introduction
Psychological tests are used to help make decisions in a variety of settings. For example, they may help us diagnose a mental illness, hire an employee, or assess achievement in school. Knowledge of psychological testing is also important for research purposes. Measurement is an essential part of any science and this course will give you an understanding of how psychologists develop and evaluate scales and tests.

The focus of this course will be on how to construct and evaluate psychological tests. We will also discuss some types of psychological tests (e.g., intelligence tests, personality tests) to familiarize students with the different types of tests available.

Course Objectives
• The primary objective of this course is to provide students with an understanding of how to develop and evaluate psychological tests.
• Students will also learn about the ethics of testing and how testing can be used to help make decisions in educational, clinical/counseling, and organizational settings.

Lessons
Overview
Each lesson includes the following components:
• lesson objectives
• reading assignment
• important terms
• lecture
• written assignment

Study Hints
• Complete all assigned readings.
• Set a schedule allowing for completion of the course one month prior to your desired deadline. (An Assignment Submission Log is provided for this purpose.)
• Web pages and URL links in the World Wide Web are subject to change. If you cannot access a link that has been listed in this course guide, use your favorite search engine (such as Google) to locate the site. To seek assistance or provide any updated information, contact your instructor.

Exams
Overview
• You must wait for grades and comments on lessons prior to taking each subsequent exam.
• For your instructor’s exam guidelines, refer to your Registration Confirmation Email, and the Exam Information sections in this course guide.

See Grading for specific information on exams, points, and percentages.

Proctor Selection/Scheduling Exams
All exams require a proctor.

Grading
Grades will be determined based on exam performance (300 points) and performance on course lessons (135 points) for a total of 435 points.

The point breakdown for the lessons and exams is presented below:

<table>
<thead>
<tr>
<th>Lesson</th>
<th>Points</th>
<th>Percentage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Lesson 2</td>
<td>15</td>
<td>3.4% Lesson</td>

<td>300</td>
<td>69.0%</td>
</tr>
</tbody>
</table>

Self-Study Lessons
There are six self-study lessons (lessons 1, 4, 7, 9, 11, and 15). These are to be completed, but are not to be
submitted for grading. Answers are provided in your textbook and toward the back of this course guide.

The following grading scale will be used:

- 90% and above: 390–435 = A
- 80% to 89%: 346–389 = B
- 70% to 79%: 303–345 = C
- 60% to 69%: 259–302 = D
- 59% and below: 0–258 = F

The final course grade is issued after all lessons and exams have been graded.

Acts of academic dishonesty, including cheating or plagiarism are considered a very serious transgression and may result in a grade of F for the course.

**About the Course Developer**
Welcome to Tests and Measurements! My name is Todd Thorsteinson and I am an Associate Professor of Psychology at the University of Idaho. I received my Ph.D. in psychology from Bowling Green State University in 1998, specializing in industrial/organizational psychology. I am interested in psychological testing as it is applied in organizations (e.g., employee selection, performance appraisal).

It is time to make arrangements with your proctor to take Exam 4, the Final Exam.
Lesson 1

*Self-Study: Introduction to Psychological Testing*

**Lesson Objectives**

This lesson provides an introduction to psychological testing. After successfully completing this lesson, you will understand/be able to:

1-1 define a psychological test;
1-2 differentiate between psychological tests and describe how tests are classified;
1-3 describe how psychological testing has developed over time;
1-4 identify and locate information about psychological tests.

**Reading Assignment**

**Important Terms**

</tr>
<tr>
<td>measurement</td>
<td>psychological tests</td>
<td></td>
</tr>
</tbody>
</table>

**Lecture**

is an essential part of science. In order to explain and predict phenomena, we need to be able to accurately measure phenomena. This is relatively easy for physical attributes (e.g., height, weight), but becomes more difficult for abstract concepts, such as depression, anxiety, and intelligence. However, we need to be able to measure these concepts if we hope to better understand them.

**Psychological tests** are used to measure these concepts. All psychological tests can be characterized as focusing on a sample of behavior, under standardized conditions, and utilizing rules for scoring. Psychological tests are used for a variety of purposes, such as diagnosing a mental illness, providing feedback on one’s interests, or evaluating the characteristics of a potential employee.

**Written Assignment**

Please read Chapter 1 carefully before starting the assignment. This assignment is a *self-study* exercise, so you will not turn this in. On pages 41 and 42 of your textbook, you will find some practice questions. Please answer all 15 of the multiple-choice questions and then check your answers with the answer key provided on the bottom of page 42 of your text. I would also like you to answer the first and third short essay questions. Answers to these questions are listed in the back of this course guide.
