

Sugarbeet Grower Workbook

Each club member is required to keep a businesslike record of the projects carried out each year. It is **good business** to keep **complete** and **accurate** records. The purpose of this record book is to let you know how you stand in dollars and cents after completing the year's work. It is an important part of your club project, as it will help others know what you have done in your club work and how well you have succeeded. Be sure to take good care of it and keep it up-to-date.

Keep your record book current. As soon as an activity is completed, such as selecting land, fertilizer, or other materials, enters it in the proper space in your record book. In addition, when you finish any project-related work, make an entry in your book. This is the best way to keep accurate, useful record of your activities.

Be sure to read the instructions on each page. Make sure you understand them, and know how to make proper entries in the book. Your parents or your leader can help you get started.

When your record book is complete, turn it over to your local 4-H leader. Your leader will check it for accuracy, sign it, and forward it to your county extension educator.

Save all pictures and newspaper clippings relating to your project. If your record is selected to represent the county in some project or other club activity, you will have all of the material needed to show what you have done. Ask your local leader or county extension educator to explain the awards.

Year 20_____		
Name		Age
Mailing address		Birth date Month / Day / Year ____ / ____ / ____
School grade complete	Years in 4-H/FFA	Years in 4-H/FFA Sugarbeet Project

Sugarbeet Grower Project

OBJECTIVES

1. To stimulate interest in growing sugarbeets
2. To learn effective crop management for sugarbeet production including
 - Fertilization
 - Insect control
 - Marketing
 - Irrigation
 - Disease control
 - Weed control
 - HarvestingAnd to learn how each affects crop quality.
3. To learn about the sugarbeet industry and its opportunities
4. To gain self-confidence and learn responsibility through experience and successful completion of the project.

REQUIREMENTS

You will:

1. Grow a minimum of one acre of sugarbeets as measured by the club leader, instructor, or a field person. Individual contracts with the sugar company are required. A contract may include more than one member.
2. Supply a description of land where you grow sugarbeets.
3. Complete a pesticide report (under chemical costs).
4. Be an active 4-H/FFA member and fulfill meeting and demonstration requirements.
5. Own your own project with a bonafide agreement or contract with your parent or landlord covering machinery, labor, seed, share, etc. Your parent and your leader must sign this.
6. Have your parents or legal guardian co-sign the contract with the sugar company.
7. Attend the annual field tour of sugarbeet projects and give an oral presentation on management practices (what it takes to produce the crop) during the tour.
8. Have an updated record book available for review during the field tour.
9. Exhibit your project at the county fair or an approved alternative.
10. If your crop is not harvested by fair, finish and turn in workbook to your county extension office on or before January 5 of the next calendar year.
11. *Individual project weight slips or market receipts **must** be included with the record book at project completion.*

EXHIBITS

Display of sugarbeets according to the local county fair book.. (Display 3 uniform beets at the county fair.)

OR

Display of sugarbeets at a public exhibit other than the county fair. Talk to your leader and/or extension educator for approval.

AND

Display your completed 4-H project record book and updated Sugarbeet Grower Workbook at the fair.

A special thanks to Amalgamated Sugar Company, Mini-Cassia Beet Growers, and the Minidoka and Casia County Extension Offices for their help in developing this project. Revised February 2004.

Preparing Sugarbeets For Exhibit

Selecting three uniform sugarbeets from your project is not easy. You will have a good exhibit if you know what you want, how to find it, and how to prepare it for an exhibit.

Your exhibit should be representative of your beet crop. Your best beets will be found where the soil is mellow and where there is a good stand. The extra large beets are found at row ends or other areas of the field where a single is isolated from others with no competition. These beets tend to be rougher, with a large multiple crown, and usually have several intertwined roots. Try to select beets that have the following characteristics:

- A. **Uniform** – Beets should be of similar size and shape.
- B. **Size** - Large beets are more desirable than smaller ones.
- C. **Shape** - Beets that are long and thick, with the thickness extending the length of the beet, are more desirable than shorter beets or long beets that do not have much thickness in the lower half or three-quarters. Round beets are preferred to flat.
- D. **Crown** -The crown should be short, small, free from hollow areas, and clean in order for topping to take away only a minimum weight and to keep the tare low.
- E. **Roots** - A beet with a single heavy root is preferred to a multiple root or beet with several intertwined roots. The root should be free of insect damage.

A well-prepared sample of three beets makes a very attractive exhibit. After selecting the desirable beets, remove the dirt by soaking rather than brushing. Brushing and rough handling scratches the skin, which will turn the surface dark. Do not use chlorine bleach as it causes the skin to deteriorate and turn black. Cut the top off square at a point where it will form a two-inch diameter cut. Trim the remainder of the crown at a 30 degree angle from the bottom leaf scar to the square cut. The beet should be able to stand on the crown end with the long tap root standing upright.

Sugarbeet score card:	
SIZE	25 POINTS
UNIFORMITY	25 POINTS
TYPE	30 POINTS
CONFORMATION	10 POINTS
CROWNS	<u>10 POINTS</u>
TOTAL	100 POINTS

Amalgamated Sugar Company has special awards for the best sugarbeets and the largest sugarbeet.

Field Tour and Presentation

The field tour involves a visit to each member's sugarbeet field.

- Arrange for a transportation committee. For safety's sake, it would be wise to use one car or truck driven by an older club member or leader.
- Arrange a time and place for the tour.
- Create a committee to decide on the lunch and drinks, location, and provider.
- Arrange the route of tour, including where you will go and when you plan to be there. A well-planned tour will allow time for everyone to see all the club projects and have time for lunch and recreation.
- At each stop, the 4-H member will give a presentation about their project. If the project is above average or below average, have the club member tell what happened. Presentations need to have a time limit in order to stay on schedule.
- Designate a recreation leader to be in charge of a program at the lunch stop. This person will obtain any necessary equipment.
- Learn by doing.

Field Map

Show the location of your sugarbeet project in relation to the rest of the farm. Indicate the number of acres in your project on the map. Show how the irrigation system is laid out for your project, including details such as head ditches, field ditches, wheel lines, sprinklers, etc.

NORTH

General Information About Sugarbeet Project at Start of Year

Sugarbeet Project for year _____

Why did you choose a sugarbeet project this year?

What do you expect to gain, accomplish, or demonstrate from your project this year?

Project Management Agreements

Describe any agreements you have made concerning land, water, equipment, seed, fertilizer, chemicals, labor, planting, cultivation, harvesting, marketing, etc. List any work that you will perform for others to offset the cost of raising your crop (if any).

SIGNATURES	
Member:	Date:
Landlord:	Date:
Leader:	Date:

3. Describe your fertilization program or schedule. Include specific fertilizers, rates applied, times of application, methods of application, and whether you used a soil test or tissue test.

4. State which herbicide(s) you used, the rates you applied, and the number of applications you made. What weeds were you trying to control? Evaluate the effectiveness of the herbicide(s) you used.

5. What variety of seed did you plant? Was it coated or raw? Describe your planting rate, the seed spacing, and your reasons for choosing this particular seed.

6. What was the plant population in your growing stand (number of plants per 100-foot row)? How did you establish this population (planting, stand thinning, flex-time, harrowing., etc.)?

7. What mechanical methods (cultivation, etc.) did you use to control weeds? Describe the effectiveness of these methods.

8. Discuss any insect(s) in the crop. List insecticides applied, methods of application, rates, and results.

9. Did you have any disease problems in your stand (seedling, powdery mildew, damping off, rhizomania, etc.)? What controls did you use? At what rates? How did you apply them? Describe their effectiveness.

10. Did any unusual weather conditions affect your crop? How was your crop affected?

11. What type(s) of soil erosion did you have on your plot (wind erosion, soil movement from irrigation, etc.)? How does the slope soil type, and type of irrigation affect the erosion on your plot? What did you do to keep soil erosion to a minimum?

12. What is your fair time estimate of yield (what the crop will yield at harvest time)? How did you reach this estimate?

13. Do you plan to continue this project next year? Explain why or why not.

14. What could you do to increase your yield or decrease your costs in another year? (Discuss new practices you would like to try.)

15. Explain your irrigation system (method, rate, number of sets, and who did the irrigating). How did you determine the irrigation schedule?

16. List any activities done for others and the dollar amount from this work that you contributed to your project.

Fair Time \$ _____

Completion \$ _____

Sugarbeets Budget

Calculating Water Applied By Revolution or Set

Step 1:

Determine the water depth in 24-hour inches for each irrigation set or cycle from Table 1 (see p. 10), using the appropriate water flow for your system. The head size may be measured in cubic feet per second, Idaho Miner's inches, or gallons per minute.

Step 2:

Select an appropriate irrigation system efficiency from Table 2 on page 10.

Select lower values for 24-hour sets, larger spacing, or windy conditions.

Step 3:

Calculate the application depth using either equation 1 or equation 2, depending upon the irrigation system type.

Equation 1: Water application depth per revolution for center pivot, or per pass for linear-move irrigation systems or partial center pivot system:

Inches of water applied per revolution of a center pivot =

$$\frac{(\text{Table 1 answer}) \times (\text{Table 2 answer}) \times \text{number of days per set}}{\text{acres} \times 100}$$

Example: 130 acre pivot, with flow equal to 900 gpm, efficiency rating (from Table 2) = 85%, 2.5 days per revolution

$$\text{Depth of water applied per revolution} = [47.60 \times 85 \times 2.5] / [130 \times 100] = 0.778 \text{ inch}$$

Equation 2: Water application per set for set-move sprinklers or gravity systems:

Inches of water applied per acre for non-center pivot systems =

$$\frac{(\text{Table 1 answer}) \times (\text{Table 2 answer}) \times \text{hours per set}}{\text{acres} \times 24 \times 100}$$

Example: 6 acres, border irrigation, flow equal to 50 Idaho Miner's inches, efficiency rating (from Table 2) = 50%, 12-hour set depth = $[23.8 \times 50 \times 12] / [6 \times 24 \times 100] = 0.99 \text{ inch}$

Table 1. Calculation of water depth (24-hour inches) applied by head size

Cubic Ft per second	Water flow (Head size)		24-hour inches per acre
	Idaho Miner's inches	Gallon per minute	
0.20	10	90	4.75
0.40	20	180	9.52
0.60	30	270	14.28
0.80	40	360	19.04
1.00	50	450	23.80
1.20	60	540	28.56
1.40	70	630	33.32
1.60	80	720	38.08
1.80	90	810	42.84
2.00	100	900	47.60
2.20	110	990	52.36
2.40	120	1080	57.12
2.60	130	1170	61.88
2.80	140	1260	66.64

Table 2. Typical irrigation system application efficiencies.

System Type	Irrigation System Efficiency* (%)
Surface Systems	
Furrow	35-65
Surge	50-55
Cablegation	50-55
Sprinkler Systems*	
Set-move	60-75
Solid-set	60-85
High pressure center-pivot	65-80
Low pressure center-pivot	75-85
Linear-move	80-87
Microirrigation	
Drip	90-95

- Use lower efficiencies with larger spacing and windy conditions.
