THE UNITED STATES OF AMERICA

TO ALL TO WHOM THESE PRESENTS SHALL COME:

University of Idaho

WHEREAS, THERE HAS BEEN PRESENTED TO THE
Secretary of Agriculture

An application requesting a certificate of protection for an alleged distinct variety of sexually reproduced, or tuber propagated plant, the name and description of which are contained in the application and exhibits, a copy of which is hereunto annexed and made a part hereof, and the various requirements of LAW in such cases made and provided have been complied with, and the title thereto is, from the records of the PLANT VARIETY PROTECTION OFFICE, in the applicant(s) indicated in the said copy, and WHEREAS, upon due examination made, the said applicant(s) is (are) adjudged to be entitled to a certificate of plant variety protection under the LAW.

NOW, THEREFORE, this certificate of plant variety protection is to grant unto the said applicant(s) and the successors, heirs or assigns of the said applicant(s) for the term of TWENTY years from the date of this grant, subject to the payment of the required fees and periodic replenishment of viable basic seed of the variety in a public repository as provided by LAW, the right to exclude others from selling the variety, or offering it for sale, or reproducing it, or importing it, or exporting it, or conditioning it for propagation, or stocking it for any of the above purposes, or using it in producing a hybrid or different variety therefrom, to the extent provided by the PLANT VARIETY PROTECTION ACT. IN THE UNITED STATES SEED OF THIS VARIETY (1) SHALL BE SOLD BY VARIETY NAME ONLY AS A CLASS OF CERTIFIED SEED AND (2) SHALL CONFORM TO THE NUMBER OF GENERATIONS SPECIFIED BY THE OWNER OF THE RIGHTS. (84 STAT. 1542, AS AMENDED, 7 U.S.C. 2321 ET SEQ.)

RAPE

'Amada'

In Testimony Whereof, I have hereunto set my hand and caused the seal of the Plant Variety Protection Office to be affixed at the City of Washington, D.C. this twenty-fifth day of June, in the year two thousand and fourteen.
1. NAME OF OWNER
University of Idaho

2. TEMPORARY DESIGNATION OR EXPERIMENTAL NAME
06.UI.WC.5.09

3. VARIETY NAME
Amanda

4. ADDRESS (Street and No., or R.F.D. No., City, State, and ZIP Code, and Country)
University of Idaho,
OTT, PO Box 443003
Morrill Hall 414
Moscow, Idaho, 83844-3003

5. TELEPHONE (include area code)
(208) 885 4550

6. FAX (include area code)
(208) 885 4551

7. IF THE OWNER NAMED IS NOT A "PERSON", GIVE FORM OF ORGANIZATION (corporation, partnership, association, etc.)
University of Idaho

8. IF INCORPORATED, GIVE STATE OF INCORPORATION

9. DATE OF INCORPORATION

10. NAME AND ADDRESS OF OWNER REPRESENTATIVE(S) TO SERVE IN THIS APPLICATION.
First person listed will receive all papers
Jack Brown
Include on all communications: Gaylene Anderson

PSES, CALS
PO Box 442339

13. E-MAIL
karren@uidaho.edu & gaylene@uidaho.edu

14. CROP KIND (Common Name)
Rapeseed or Canola

15. GENUS AND SPECIES NAME OF CROP (Botanical)
Brassica napus L.

16. FAMILY NAME (Botanical)
Brassicaceae

17. IS THE VARIETY A FIRST GENERATION HYBRID?
YES X  NO

18. DOES THE VARIETY CONTAIN ANY TRANSGENES? (OPTIONAL)
YES X  NO

19. CHECK APPROPRIATE BOX FOR EACH ATTACHMENT SUBMITTED
(Provide instructions on reverse)
a. X Exhibit A. Origin and Breeding History of the Variety
b. X Exhibit B. Statement of Distinctness
c. X Exhibit C. Objective Description of Variety
d. X Exhibit D. Additional Description of the Variety (Optional)
e. X Exhibit E. Statement of the Basis of the Owner's Ownership
f. X Exhibit F. Declaration Regarding Deposit
g. X Voucher Sample (3,000 viable untreated seeds or, for tuber propagated varieties, verification that tissue culture will be deposited and maintained in an approved public repository)
h. ☐ Filing and Examination Fee ($4,382), made payable to "Treasurer of the United States" (Mail to the Plant Variety Protection Office)

20. DOES THE OWNER SPECIFY THAT SEED OF THIS VARIETY BE SOLD ONLY AS A CLASS OF CERTIFIED SEED? (See Section 63(a) of the Plant Variety Protection Act)
X YES [If "yes", answer items 21 and 22 below] ☐ NO [If "no", go to item 23] ☐ UNDECIDED

21. DOES THE OWNER SPECIFY THAT SEED OF THIS VARIETY BE LIMITED AS TO NUMBER OF CLASSES?
X YES ☐ NO

22. DOES THE OWNER SPECIFY THAT SEED OF THIS VARIETY BE LIMITED AS TO NUMBER OF GENERATIONS?
X YES ☐ NO

Foundation ☐ Certified ☐
(If additional explanation is necessary, please use the space indicated on the reverse.)

23. HAS THE VARIETY (INCLUDING ANY HANKESTED MATERIAL) OR A HYBRID PRODUCED FROM THIS VARIETY BEEN SOLD, DISPOSED OF, TRANSFERRED, OR USED IN THE U. S. OR OTHER COUNTRIES?
X YES ☐ NO

24. IS THE VARIETY OR ANY COMPONENT OF THE VARIETY PROTECTED BY INTELLECTUAL PROPERTY RIGHTS (PLANT BREEDER'S RIGHT OR PATENT)?
X YES ☐ NO

25. The undersigned owner(s) is(are) the owner of this sexually reproduced or tuber propagated plant variety, and believe(s) that the variety is new, distinct, uniform, and stable as required in Section 42, and is entitled to protection under the provisions of Section 42 of the Plant Variety Protection Act.

Owner(s) is (are) informed that false representation herein can jeopardize protection and result in penalties.

SIGNATURE OF OWNER
Jack Brown

NAME (Please print or type)
Professor/Plant breeder
CAPACITY OR TITLE
5/24/2011 DATE
GENERAL INSTRUCTIONS: To be effectively filed with the Plant Variety Protection Office (PVPO), ALL of the following items must be received in the PVPO:

1. Completed application form signed by the owner; (2) completed exhibits A, B, C, E, F; (3) for a tuber reproduced variety, verification that a viable (in the sense that it will reproduce an entire plant) tissue culture will be deposited and maintained in an approved public repository; and (4) payment by credit card or check drawn on a U.S. bank for $4,382 ($518 filing fee and $3,864 examination fee), payable to “Treasury of the United States” (See Section 97.6 of the Regulations and Rules of Practice).

NEW: With the application for a seed reproduced variety or by direct deposit soon after filing, the applicant must provide at least 3,000 viable untreated seeds of the variety per se, and for a hybrid variety at least 3,000 untreated seeds of each line necessary to reproduce the variety. Partial applications will be held in the PVPO for not more than 90 days; then returned to the applicant as un-filed. Mail application and other requirements to Plant Variety Protection Office, AMS, USDA, Room 401, NAL Building, 10301 Baltimore Avenue, Beltsville, MD 20705-2351. Retain one copy for your files. All items on the face of the application are self-explanatory unless noted below. Corrections on the application form and exhibits must be initialed and dated. DO NOT use masking materials to make corrections. If a certificate is allowed, you will be requested to send a payment by credit card or check payable to “Treasury of the United States” in the amount of $768 for issuance of the certificate. Certificates will be issued to owner, not licensee or agent.

NOTES: It is the responsibility of the applicant/owner to keep the PVPO informed of any changes of address or change of ownership or assignment or owner’s representative during the life of the application/certificate. The fees for filing a change of address; owner’s representative; ownership or assignment; or any modification of owner’s name is specified in Section 97.175 of the regulations. (See Section 101 of the Act, and Sections 97.130, 97.131, 97.175(h) of the Regulations and Rules of Practice.)

Plant Variety Protection Office
Telephone: (301) 504-5518 FAX: (301) 504-5291
General E-mail: PVPOmail@usda.gov
Homepage: http://www.ams.usda.gov/science/pvpo/PVPindex.htm

SPECIFIC INSTRUCTIONS:

To avoid conflict with other variety names in use, the applicant must check the appropriate recognized authority and provide evidence that the permanent name of the application variety (even if it is a parental, inbred line) has been cleared by the appropriate recognized authority before the Certificate of Protection is issued. For example, for agricultural and vegetable crops, contact: U.S. Department of Agriculture, Agricultural Marketing Service, Livestock and Seed Programs, Seed Regulatory and Testing Branch, 801 Summit Crossing Place, Suite C, Gastonia, North Carolina 28054-2193 Telephone: (704) 810-8870. http://www.ams.usda.gov/lsg/seed.htm

ITEM

19a. Give: (1) the genealogy, including public and commercial varieties, lines, or clones used, and the breeding method; (2) the details of subsequent stages of selection and multiplication; (3) evidence of uniformity and stability; and (4) the type and frequency of variants during reproduction and multiplication and state how these variants may be identified.

19c. Exhibit C forms are available from the PVPO Office for most crops; specify crop kind. Fill in Exhibit C (Objective Description of Variety) form as completely as possible to describe your variety.

19d. Optional additional characteristics and/or photographs. Describe any additional characteristics that cannot be accurately conveyed in Exhibit C. Use comparative varieties as is necessary to reveal more accurately the characteristics that are difficult to describe, such as plant habit, plant color, disease resistance, etc.

19e. Section 52(5) of the Act requires applicants to furnish a statement of the basis of the applicant’s ownership. An Exhibit E form is available from the PVPO.

20. If "Yes" is specified (seed of this variety be sold by variety name only, as a class of certified seed), the applicant MAY NOT reverse this affirmative decision after the variety has been sold and so labeled, the decision published, or the certificate issued. However, if “No” has been specified, the applicant may change the choice. (See Regulations and Rules of Practice, Section 97.103).

23. See Sections 41, 42, and 43 of the Act and Section 97.5 of the regulations for eligibility requirements.

24. See Section 55 of the Act for instructions on claiming the benefit of an earlier filing date.

22. CONTINUED FROM FRONT (Please provide a statement as to the limitation and sequence of generations that may be certified.)

23. CONTINUED FROM FRONT (Please provide the date of first sale, disposition, transfer, or use for each country and the circumstances, if the variety (including any harvested material) or a hybrid produced from this variety has been sold, disposed of, transferred, or used in the U.S. or other countries.)

Amount of seed sold August 2010 and used to plant Certified Seed that will be harvested summer of 2011. Non-certified seed will be sold for crush.

24. CONTINUED FROM FRONT (Please give the country, date of filing or issuance, and assigned reference number, if the variety or any component of the variety is protected by intellectual property right (Plant Breeder’s Right or Patent).)

According to the Paperwork Reduction Act of 1995, an agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a valid OMB control number. The valid OMB control number for this information collection is 0581-0055. The time required to complete this information collection is estimated to average 1.4 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information.

USDA is an equal opportunity provider and employer.
‘Amanda’
Winter Canola
Brassica napus L.

Exhibit A: Origin and Breeding History

‘Amanda’ is a near-homozygous winter rapeseed [Brassica napus L. spp. oleifera (Metzg) Sinsk. f. biennis] cultivar with canola-quality seed oil and canola-quality seed meal, selected for high adaptability to the dryland and irrigated regions of the inland Pacific Northwest.

This cultivar was developed from a single plant selection in 2004 from an F8 population from the cross Ceres/Samurai. Ceres is a low erucic acid (less than 20 g kg\(^{-1}\)), low glucosinolate content cultivar (less than 30 µmol g\(^{-1}\) of defatted seed meal, developed by Calgene, Inc., California (PVP 8900135, PI 601660). Samurai is a 00 (low erucic acid and low seed meal glucosinolate content) cultivar derived from France.

F1 seeds from the original cross were produced in 1993 and the F1 plant generation was increased to F2 seed in the greenhouse in 1994. Between 1994 and 2001, seed from the original F2 population were increased to F7 by five round of natural pollination under field conditions. After each growing season, single plants were selected using a visual assessment of general appearance and pod characteristics. Seed from each single plant were evaluated for oil content, fatty acid profile and glucosinolate content. Seed from plants with high oil content, good fatty acid profiles and low seed glucosinolates, were then bulked together and used to plant the following year’s crop.

In the summer of 2001, 10 single plants were selected from the F8 population based on visual evaluation of plant uniformity. In the fall of 2001, the seed from each selected plant was planted out as head row (Figure 1). Each head-row plot being a single plot with two rows spaced 18 cm apart and 5 m in length. Head-row plots were visually evaluated for fall establishment, winter survival, days to 50% flowering, plant height, lodging and maturity. At harvest two of the ten head row plots were identified (coded as 93.WC.31.A2.1.2 and 93.WC.31.A2.6).

Ten single plants were taken from each of the two selections and plants were threshed separately. The remainder of the plot was bulked by hand threshing. Seed from the single plant selections were used to plant 10 head row plots in the fall of 2002 (F10) while the bulked seed was used to plant a replicated yield trial in the fall of 2002. Seed from each single plant selected were evaluated for oil content, fatty acid profile and glucosinolate content, and any selections with poor quality were discarded. Head row plots and yield trial plots were visually assessed for fall establishment, winter survival, days to 50% flowering, plant height, lodging and maturity. At harvest one head row was selected from each of the two families for advancement. From each selected head row a further 10 plants were threshed separately, and these seeds used to plant head-row plots in the fall of 2003. The remainder of the 2002-2003 selected head-row plot was bulk threshed by hand and used to plant another replicated yield trial in the fall of 2003 (Figure 1).
Based on a further round of visual assessment, combined with seed yield and quality information assessed from the yield trials, a single head-row plot was selected in the summer of 2004 (coded as 03.WC.31.34.2122.12 later coded as 06UIWC.5.09). Twenty single plants were threshed separately from this selected head-row plot. In addition the remainder of the 2-row x 5 m plot was bulk harvested by hand threshing. Seed from the single plant selections were used to plant 20 head-row plots in the fall of 2004. The hand threshed bulk seed was used to plant yield trials planted at locations throughout Idaho, Oregon and Washington (the Pacific Northwest Winter Canola Variety Trial). This pattern of screening head-row plots for visual and quality uniformity, discarding head-row plots which failed to meet uniformity standards. Each year single plants were threshed separately to plant head-row plots the following year while the bulked head-row plot seed was used to plant regional yield trials.

After the fourth year of regional yield trials 2007-2008, 300 seeds were planted in a glasshouse, artificially vernalized and grown to maturity in the glasshouse. Any plants which did not show visual uniformity were discarded. After harvest each plant was threshed separately and the seed tested for oil content, fatty acid profile and glucosinolate content. Seed from plants which showed high oil content, good fatty acid profile and low seed meal glucosinolate content (290 single plants) were planted in the field in the fall of 2009 to produce Breeders seed. Each single plant from the glasshouse increase was used to plant two 2-rows x 5 m plots arranged at random in the Breeders seed increase block. Plots were visually assessed throughout the growing season for uniformity. Any non-uniform plots were removed and the remaining plots were combine harvested to produce Breeders Seed. Breeder’s seed was planted in the fall of 2010 to produce Foundation seed which will be harvested in the summer of 2011. Throughout the stages of Amanda seed increases including pre-Breeders seed, Breeders seed, Foundation seed and finally Certified seed production, plants were consistently uniform and stable, and no variants were observed over this four year period.

References

Figure 1. Breeding scheme used to develop Amanda winter canola.
Exhibit B: Statement of Distinctness

Amanda is most similar in plant appearance (i.e. leaf shape, plant stature, and color) to the cultivar Athena (Brown et al., 2004). However, Amanda plants have a different leaf shape. Amanda lower leaves have greater attachment than those of Athena, and have markedly lower lobbing (Figure 2). Amanda middle leaves are longer and thinner and have fewer lobes compared to Athena, and Amanda upper leaves are shorter and stubbier than those from Athena.

On average Amanda produced 50% flower bloom after 140 Julian days while Athena flowers significantly earlier, on average 137 Julian days (Table 1). In addition Athena has short stature (on average 136 cm tall) and is significantly shorter than Amanda plants which average 141 cm tall (Table 2).

OBJECTIVE DESCRIPTION OF VARIETY
RAPESEED (Brassica napus and B. campestris)

NAME OF APPLICANT (S) TEMPORARY OR EXPERIMENTAL DESIGNATION VARIETY NAME
University of Idaho 06.UI.WC.5-09 Amanda

ADDRESS (Street and No. or RD No., City, State, Zip Code, and Country)
University of Idaho, PO Box 443003, Morrill Hall 414, Moscow, Idaho, 83844-3003.
FOR OFFICIAL USE ONLY

PVPO NUMBER #201100403

1. SPECIES
* X. Brassica napus ___ Brassica campestris

2. TYPE
* ___ Spring . X. Winter

3. PLANT HEIGHT (at pod maturity)
   1. 5. 2. 0. cm Tall (compare to standard variety below)
   ___ 5. 2. cm shorter than Check variety: _Baldur_

   Height same as Check variety: _
   ___ 5. 1. cm taller than Check variety: _Athena_

   * Height Class: 4. Autumn sown ___ Spring sown
   1 = Short (Candle) 1 = Short (Erlu)
   2 = Medium short () 2 = Medium short ()
   3 = Medium (Jet Neuf) 3 = Medium (Cresus)
   4 = Medium tall () 4 = Medium tall ()
   5 = Tall (Dwarf Essex) 5 = Tall (Petranova)

4. STEM ANTHOCYANIN

5. SEED COTYLEDONS (maximum width fully developed; mean of 50 graded seeds)
   2. 1. Narrow (Erlu) 2. Medium (Primor) 3. Broad (Expander)

6. SEEDLING GROWTH HABIT (leaf rosette)
   1. 1. Upright 2. Prostrate (short photoperiod)
7. LEAVES

* 2 Margins (serration): 1 = Absent or very weak (Akela) 2 = Weak (Arvor, Jet Neuf) 3 = Medium (Primor) 4 = Strong (Candle, Kentan)

* 3 Lobing (fully developed leaf on plant or rosette)
  1 = Absent or very weak (Akela) 2 = Weak (Arvor) 3 = Medium (Primor) 4 = Medium Strong (Argus) 5 = Strong (Kentan)

* 2 Leaf Attachment to Stem: 1 = Fully clasping (Candle) 2 = Partial clasping (Jet Neuf) 3 = No Clasping ( )

* 3 Color: 1 = Light green (Arvor) 2 = Medium green (Primor) 3 = Medium dark green (Oro) 4 = Dark green (Brunowski, Rapora)

* 1 Glaucosity: 1 = Absent 2 = Weak (Span) 3 = Weak to Medium (Gulliver) 4 = Medium (Magnus) 5 = Medium to strong (Oro) 6 = Strong

8. FLOWERS

* 1 Flower Buds Location 1 = Buds at tip of apical meristem (Jet Neuf) 2 = Buds immediately below apical meristem (Candle)

* 2 Petal color: 1 = Pale yellow ( ) 2 = Yellow (Jet Neuf, Primor) 3 = Orange ( ) 4 = White ( )

* 1 Anther dotting (at opening of flower; given percentage %) 1 = Absent ( ) 2 = Few ( ) 3 = Medium (Primor) 4 = Many ( )

* 5 Flowering class (Autumn sown) 1 = Very early (Arvor) 2 = Early (Primor) 3 = Medium early ( ) 4 = Medium late ( )

* 5 Flowering class (Spring sown) 1 = Very early (Arvor) 2 = Early (Kosa) 3 = Medium early ( ) 4 = Late (X)

9. PODS (Slique)

* 1 Pod type: 1 = Bilateral single pod (Jet Neuf) 2 = Other ( )

* 2 Slique beak length: (given length: 12.8 mm) 1 = Short (Forto) 2 = Medium (Liragold) 3 = Long (Rapol)

* 3 Pod length: (given length: 72.9 mm) 1 = Short ( ) 2 = Medium ( ) 3 = Long ( )

* 2 Pod width: (given width: 5.7 mm) 1 = Narrow ( ) 2 = Medium (X) 3 = Wide ( )

* 4 Pod habit: 1 = Erect (Gulliver) 2 = Semi-erect to erect (Oro) 3 = Semi-erect (Brink) 5 = Horizontal

* 2 Pedicel length: (given length: 21.2 mm) 1 = Very short ( ) 2 = Short ( ) 3 = Long ( )

* 2 Ripening Class (Autumn sown): 1 = Very early ( ) 2 = Early (X) 3 = Medium ( ) 4 = Late ( ) 5 = Very late ( )

* 2 Days to Maturity

* 3 Days earlier than Check variety: Baldur

* Maturity same as Check variety: Athena

* 6 Days later than Check variety: Ericka

10. SEEDS

* 5.3 g/1000 unsized seed

* 0.6 g less than Check variety: Athena

* Weight same as Check variety: Athena

* 0.6 g more than Check variety: Cascade

* 4 Weight Class (grams): 1 = less than 3.0 (Candle) 2 = 3.0 - 3.9 ( ) 3 = 4.0 - 5.0 (Jet Neuf) 4 = more than 5.0 (X)

* 3 Seeds Per Pod: (given number: 28.1 per pod): 1 = Low ( ) 2 = Medium ( ) 3 = High ( )

* 4 Testa Color: 1 = Black (Jet Neuf) 2 = Red ( ) 3 = Yellow (Yellow Sarson) 4 = Dark to black (X) 5 = Reddish-brown to black ( ) 6 = Other
11. CHEMICAL COMPOSITION OF SEED

* 1. Euric Acid: 1 = Low (less than 2%) 2 = Intermediate 3 = High (more than 50%)

* 2. Glucosinate Content: (give: 1_ -L ..._L_, _L_ _L_mol/gram of defatted seed meal)
   1 = Low - less than 30 _L_mol/gram of defatted seed meal (Candle) 2 = High - More than 30 _L_mol/gram of defatted seed meal (Mikado)

17. DIRECTIONS

Select the number which characterizes the variety in the features above. Those characteristics marked with an asterisk "*" should be recorded. Any others should be recorded if possible to help establish novelty or uniqueness. Characteristics described, including numerical measurements, should represent those that are typical for the variety. Give test area conditions.
Exhibit D: Additional Description of Variety

After fall seeding, Amanda seedlings emerge quickly and produce a good fall stand which was not significantly different from the other three cultivars (Ericka, Athena and Baldur) (Table 3). Amanda showed significantly better winter-hardiness than Athena or Baldur, although all cultivars tested did indeed have good winter-hardiness. Flower bloom dates of Amanda were 134 Julian days, which was significantly later than Athena and Ericka and earlier than Baldur. Amanda plants were on average 152 cm tall after flowering ending, and were significantly taller than Athena and Ericka and shorter than Baldur. Amanda is resistant to lodging.

Amanda was evaluated in field trials in Idaho, Washington and Oregon for six growing seasons from 2004-2005 to 2009-2010. All these evaluations trials were part of the Pacific Northwest Winter Canola Variety Trials (Brown et al., 2005, 2006, 2007, 2008, 2009, and 2010). Performance was compared to three commercially available cultivars: ‘Athena’, ‘Ericka’, and ‘Baldur’. The cultivars Ericka (Brown et al., 1997) and Athena (Brown et al., 2004) were both developed in the University of Idaho Canola Breeding Program. Baldur is a hybrid winter canola cultivar developed in Europe. Athena and Baldur have occupied almost the total acreage of winter canola in the region over the past 5 years.

Over 41 evaluation trials, Amanda produced significantly higher seed yield (3,541 kg ha⁻¹), and yield similar to the high yielding hybrid cultivar Baldur (3,490 kg ha⁻¹) (Table 4). Amanda produced high seed yield under conventional tillage, direct seeding and under irrigation (Table 5). In more recent trials (data not shown), Amanda has shown good potential for early seeding into fallow ground (i.e. June to July) and having a long vernalization requirement, will not flower in the planted year even when planted in May.

Averaged over 39 year sites, Amanda produced high seed oil content (402 g kg⁻¹), but was not significantly different from the other three commercial check cultivars (Table 6).

Averaged over 5 year sites, total glucosinolate content of Amanda seed meal was 20.9 µmol g⁻¹ of defatted seed meal, which was not significantly different from Athena. Seed meal glucosinolate content of Amanda breeders’ seed was lower than from field trials (Table 8), most likely due to mixing which occurred with field trial harvest. Breeders’ seed total glucosinolate content of Amanda was not significantly different from certified seed of Athena harvested in the same year, albeit at a different location. Primary glucosinolate of Amanda seed meal is 2-hydroxy-3-butenyl glucosinolate, accounting for approximately 72% of the total glucosinolates. Other glucosinolates included 3-butenyl (23% of total), with trace amounts of 4-pentenyl and 2-hydroxy-4-pentenyl glucosinolates.

Amanda has consistently produce excellent canola-quality seed oil (Table 9) with less than 0.2% erucic acid content, and over 63% oleic acid. Seed oil fatty acid profile of Amanda
was not significantly different from that of Athena or Ericka.

Amanda produced a long seed pod and a high seed number per pod (Table 10). Amanda pod length is not significantly different than Ericka or Athena but significantly longer than Baldur. Amanda pod width and pedicel length is not significantly different from the other three cultivars. Amanda produces significantly more seeds pod\(^{-1}\) than Ericka or Baldur.

8. Does the applicant own all rights to the variety? Mark an "X" in the appropriate block. If no, please explain.  [ ] YES  [ ] NO

9. Is the applicant a U.S. national or a U.S. based entity? If no, give name of country.  [X] YES  [ ] NO

10. Is the applicant the original owner?  [ ] YES  [X] NO  If no, please answer one of the following:

   a. If the original rights to variety were owned by individual(s), is (are) the original owner(s) a U.S. National(s)?  [X] YES  [ ] NO  If no, give name of country

   b. If the original rights to variety were owned by a company(ies), is (are) the original owner(s) a U.S. based company?  [ ] YES  [ ] NO  If no, give name of country

11. Additional explanation on ownership (Trace ownership from original breeder to current owner. Use the reverse for extra space if needed):

[ ]

PLEASE NOTE:

Plant variety protection can only be afforded to the owners (not licensees) who meet the following criteria:

1. If the rights to the variety are owned by the original breeder, that person must be a U.S. national, national of a UPOV member country, or national of a country which affords similar protection to nationals of the U.S. for the same genus and species.

2. If the rights to the variety are owned by the company which employed the original breeder(s), the company must be U.S. based, owned by nationals of a UPOV member country, or owned by nationals of a country which affords similar protection to nationals of the U.S. for the same genus and species.

3. If the applicant is an owner who is not the original owner, both the original owner and the applicant must meet one of the above criteria.

The original breeder/owner may be the individual or company who directed the final breeding. See Section 41(a)(2) of the Plant Variety Protection Act for definitions.

According to the Paperwork Reduction Act of 1995, an agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a valid OMB control number. The valid OMB control number for this information collection is 0581-0055. The time required to complete this information collection is estimated to average 0.1 hour per response, including the time for reviewing the instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or part of an individual's income is derived from any public assistance program (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD).
