University of Idaho Extension programs that are making a difference in Idaho.

Idaho Master Forest Stewards spread better forestry in 2017-2018

AT A GLANCE

Idaho Master Forest Stewards are volunteers trained and certified by UI Extension who provide educational assistance to forest owners and others interested in forestry.

The Situation

Roughly 1.7 million acres of Idaho forests (over 40 percent of the forests in many northern Idaho counties) are owned and managed by over 36,500 family forest owners. Family forests are critical to timber supply, water, wildlife and many other shared values. The number of family forest owners is increasing due to timber companies selling forest lands and property splits. Unfortunately, there are fewer public and private foresters to help forest owners manage their forests.

A 2016 survey of 2,869 Idaho forest owners by the University of Idaho Policy Analysis Group found that forest owners' peers and social networks were the most used and most important sources of information, recommendations and opinions in decision-making about their forests. Complete results of that survey are available at www.uidaho.edu/cnr/policy-analysis-group.

Our Response

Given the importance Idaho forest owners place on peer-to-peer interaction, one way to increase the capacity to give more family forest owners more forestry

knowledge and skills is through a master volunteer program.

Extension programs have long developed master gardeners, 4-H leaders and other volunteers to help spread current, research-based knowledge. In 2008, UI Extension received a grant through the Idaho Department of Lands to develop the Idaho Master Forest Stewards (IMFS) program to improve the growth and health of Idaho forests through forestry education by trained and certified volunteers.

A steering committee of 16 forest owners provided the initial guidance to the program in two, one-day retreats. The resulting program consists of 70 hours of training, including:

- Existing UI Extension programs: “Forestry Shortcourse” and field days on thinning and pruning, insects and disease, and forest measurement;
- four one-day IMFS “core” sessions, with content on family forest owner assistance efforts, native understory plants, invasive species, riparian ecology and adult and extension education methods; and
- a case study where trainees spend a day with a natural resource professional and write a two-page case study of what they learn.

In return for their training, certified Idaho Master Forest Stewards provide at least 70 hours of volunteer service. Volunteers must also get 15 hours of continuing education annually to remain certified. Thus far, Idaho Master Forest Stewards have collectively completed 2,641 hours of continuing education in addition to their initial training to become certified volunteers.

Program Outcomes

Thirty-one volunteers are certified and actively volunteering in the IMFS program as of November 2018. An additional 49 Idaho Master Forest Stewards are in various stages of completing their training.

In a final 145-item knowledge and experience assessment, all certified IMFS volunteers have scored over 90 percent correct, demonstrating an average percentage knowledge increase of 34 percent over the course of the training.

In 2017-2018, Idaho Master Forest Stewards provided over 528 hours of volunteer service to 3,751 forest owners and others. In addition to interacting with individual peer forest owners, Idaho Master Forest Stewards volunteered in a wide range of activities, including: hosting and teaching at forest owner field educational programs; writing articles for newspapers and

magazines; teaching youth about forests and forestry; and serving in leadership positions in the Idaho Forest Owner Association, Idaho Tree Farm Program and conservation districts. The value of Idaho Master Forest Stewards’ 2017-2018 volunteer hours is estimated at \$11,140.

Thirty-two Idaho Master Forest Stewards have met the initial 70 hours of volunteer payback since the first volunteers were certified in 2010. Some volunteers have greatly exceeded this. Thus far, 20 volunteers have served at least five years, 14 volunteers have provided over 250 hours of volunteer service, and six volunteers have provided over 500 hours of volunteer service.

The Idaho Master Forest Stewards program is built on a philosophy of shared leadership between the volunteers and University of Idaho Extension. Volunteers are guiding the IMFS program’s continuing evolution. For example, in 2018 they met twice to discuss ongoing IMFS program development, listen to presentations on climate science and forestry, and tour assisted migration trials that have been established on forest industry lands that are being measured every five years.

The Future

Nineteen people are already signed up for the 2019 IMFS volunteer training cohort. Idaho Master Forest Stewards will continue to help sustain Idaho’s forests. They will also inform the forestry community about family forest owners’ needs and help guide University of Idaho Extension and research programs and technical assistance efforts of public and privately employed foresters.
