

Possible Causes of Overweight in Young Children

Laurel Branen, PhD, RD, LD and Janice Fletcher, EdD

- Genetics
- A medical condition that increases fat storage and weight gain
- Medication that has weight gain as a side effect
- Lack of exercise more commonly contributes to weight gain than does excessive eating
- Not recognizing satiety cues (feeling satisfied), often due to adults overriding cues
- High fat and/or high calorie intake, due to exposure to highly palatable foods
- Cultural or family imperatives to overeat
- Eating for non-nutritional reasons
 - rewarding with food
 - consoling with food
 - eating out of boredom
 - eating to procrastinate
 - eating as a substitute for love
 - eating for entertainment

Posibles Causas de sobrepeso en niños pequeños

Laurel Branen, PhD, RD, LD and Janice Fletcher, EdD

- Genètica
- Condición mèdica que incrementa el almacenamiento de grasa y aumento de peso
- Medicamentos que tienen aumento de peso como efecto secundario
- Por lo comùn, la falta de ejercicio contribuye màs al aumento de peso que el comer en exceso
- Falta de reconocimiento de los indicadores de saciedad (sentirse satisfecho, lleno), a menudo debido a la influencia de los adultos
- Consumo de alimentos de alto contenido calòrico o graso, debido a exposición a comidas sumamente agradables al paladar
- Imperativos culturales o familiares para comer en exceso.
- Comer por razones no nutricionales
 - recompensar con comida
 - consolar con comida
 - comer por aburrimiento
 - comer para procastinar o demorar una tarea
 - comer como substitución del amor
 - comer como entretenimiento

A Learning Module for Thinking about Feeding Young Children with Food Allergies in Group Settings

Janice Fletcher, EdD, Laurel Branen, PhD, RD, LD, Shannon Rusca

Learning Objectives:

- 1. Understand the difference in food allergy, food intolerance, and food aversion.
- 2. Develop an understanding of the serious impact of food allergies on young children.
- 3. Develop a repertoire of strategies to protect children from allergens in group settings.
- 4. Understand a Food Allergy Action Plan for a child in a group mealtime setting.

Introduction

When working with young children in group settings, you will teach and nurture young children with food allergies. You will work with their families and the staff who serve food to the child. Let's think about food allergies and children who eat meals and snacks in group settings where you may work or consult.

Food allergies are common in young children, especially allergies to peanuts, tree nuts, milk, and wheat. There are food allergies, food intolerances, and food aversions. Do you know the difference?

Do you know the common symptoms of food allergies? How will you tell if a child is having an allergic reaction to a food? If a child has an allergy, you MUST recognize the child's symptoms.

Common symptoms are: difficulty breathing; a rash; vomiting or diarrhea; or complaints of a weird feeling in their mouths. They may display obvious swelling of the lips, tongue, or mouth.

When an allergic reaction occurs, the common treatment is to try to reduce the body's release of histamine; so an anti-histamine is administered. A doctor may prescribe Benedryl[®], or for more severe reactions, an Epi-Pen[®] or Twinject[®] which is an injection of an anti-histamine. Because the child must have immediate care, the child needs a responsive adult who is prepared and ready to administer the drug.

Are you ready to support a child with a food allergy? Think about your role in feeding children with food allergies in the group setting.

You may choose to read an easy-to-follow booklet about the characteristics of allergies and treatment of allergies. Learn how food allergy and food intolerance are different things. The booklet offers basic information for working with children with food allergies. This booklet is from the well-respected National Institute of Allergies and Infectious Diseases. http://www3.niaid.nih.gov/topics/foodAllergy/PDF/foodallergy.pdf

Planning for Feeding Children with Allergies in Group Settings

Memorize the following five key words. They represent five key concepts for feeding children with allergies in group settings.

Food Allergies are SERIOUS

Food allergies are deadly serious. Recognize the life-threatening issue that a child's food allergies can bring. You never can be certain when the reaction to the unsafe food will be mild or when the reaction can go from what appears to be a tickle in the child's throat to full blown respiratory arrest.

Resist thoughts that a child with an allergy "might be able to eat a little bit of this food, just this one time, because it will taste so good to him, and he wants it, and besides that, he's hungry!"

PROTECT AND PREVENT

As adults who choose to work with young children, we take on the role of helping tiny humans who need our protection to survive. This protective role is all the more obvious when it comes to keeping a child with an allergy away from the unsafe food.

Many things that we take for granted in feeding typical children are intensified when we need to PROTECT a child with an allergy. The food environment we provide will need to be adapted to keep the child safe.

Even hand lotions, soap, and cleaners contain the allergen. Reading labels is essential. We will need to share our knowledge about allergens with everyone who comes into that child's world. That means cooks, classroom staff, custodians, classmates, and other children's parents.

Keeping the allergen away from the child and the child away from the allergen is our job as the child's advocate in the group setting.

KNOW what to expect

Know characteristics of the child's allergies and the characteristics of the child's reactions to the allergen. When a child with a food allergy is in your care, close communication is essential with parents or guardians, and as appropriate, with the child's physician. Frequent, honest communication makes asking any question, large or small, or sharing information more likely. Know the words a child might use when an allergic reaction is occurring. Know about foods or even non-food items that may have the allergen in them. (For example, if a child is allergic to nuts, know that many foods use nut oils as an ingredient. Find out the possible variety of names of those "nut oil" ingredients.)

Know what the child's symptoms might be, if he is having an allergic reaction. Click on the link below. You will find a rich website from the Food Allergy News, *Vol. 13, No. 2.* ©2003 *The Food Allergy &Anaphylaxis Network.* Read some of the ways children might describe allergic reactions as they are experiencing the reactions.

http://www.foodallergy.org/school/childdescribe.pdf

Develop a PLAN

Those who enroll children with allergies in their programs must insist on a Food Allergy Action Plan. Adults who take care of a child need to know when a child needs help and they must know exactly what to do.

Learn about the Food Allergy and Anaphylaxis Network. This site displays an allergy action plan form to use in a child care center. The form for the plan is commonly used by doctors to help children keep safe in child care and school centers.

The child's physician will fill out the action plan, which will then be studied by the child care center director, staff, and parents. In case of an encounter with the food to which the child is allergic, the plan will be followed.

http://www.foodallergy.org/actionplan.pdf

Below is a real **Food Allergy Action Plan** that was developed by a physician and child care director. We changed the names and dates to protect confidentiality. Review the plan. See if you can answer these questions after your review.

- 1. When do you take action for this child's nut allergy?
- 2. How will you know if the child is having an allergic attack?
- 3. When will you call 911?

FEEDING YOUNG CHILDREN IN GROUP SETTINGS

Name: Parker Johnson Birthdate: 9/17/0000

EMERGENCY ACTION PLAN:

Parents will provide an antihistamine, and an emergency adrenalin self-injector pen to stay with this child at all times. All caretakers should know where these medications are located and how to use them.

- A. If this child has a suspected Ingestion of any of their allergic foods, and is EITHER <u>without any</u> <u>Initial symptoms OR with just having mild skin symptoms:</u>
 - 1. Note the time, and stay with them. They will need to be observed closely for the next two hours.
 - Administer the oral antihistamine (Benadryl, 3 chewable tablets), as ordered by the doctor.
 Call one of the parents at the numbers listed above. Call the emergency contact if one of the parents cannot be reached. Call Dr. Kraemer if the parents and emergency contacts cannot be reached.
 - It one of the above usied number scan be reached, you are advised to call 911 to have them help younseess the situation
 - 5. If the child is <u>still having either no or very mild skin symptoms</u>, the parents or any of the above listed emergency contacts may remove the child and their emergency medications from the site to transport them to either their home or to the nearest emergency facility.
 - 6. The child should remain under the direct supervision of the parents or should remain in an Emergency Facility for the remaining two hours of observation. Reactions that start as only mild skin symptoms can still occasionally evolve into potentially more serious systemic symptoms.
- B. If this child has a suspected ingestion of any of their allergic foods, <u>AND if they begin showing</u> <u>ANY of the above potentially serious symptoms (see Page 1):</u>
 - Note the time, and stay with them.
 - 2. Administer the oral antihistamine (benadryl, 3 chewable tablets), as ordered by the doctor.
 - 3. Administer the epinephrine self-injector pen (Epi-pen Jr87), as ordered by the doctor.

Take off the safety cap. Place it against the meaty anterior muscles of the thigh. Hold the leg steady. Push in (or jab) the pen until you can feel the mechanism activate. Then hold it in place for a count to ten. Discord the pen.

I Do not nesitate to administer the adrenaline injector per even if the parents, the emergency contacts or the doctor contact be reached il

- 4. Call 911 to assess and have them (Figure transported to the nearest emergency room. Take this sheet with you to the Emergency Room. The doctors there will take over.
- Then try to contact the parents, or the emergency contacts, or Dr. Kraemer at the numbers listed above.

Strategies for Program Staff who Feed Young Children in Group Settings

Janice Fletcher, Laurel Branen, and Shannon Rusca University of Idaho

Use these strategies to avoid serious life-threatening scenarios for a child with a food allergy.

- Talk often and honestly with the child's parents
- Memorize the Food Allergy Action Plan
- Read labels for EVERYTHING that comes into the room
- Cheerfully and steadfastly offer alternative foods to protect the child from the allergens
- Carry the child's medicine with you at all times and for all activities at the center
- Help the child learn about his allergy and to stay away from that allergen
- Help the child learn to ask questions about what is in his food
- In a matter of fact fashion, enlist classmates to help protect a child from the allergen.
