

**1996 CROP INPUTS COST SUMMARY
FOR IDAHO**

By

Paul E. Patterson, Patricia D. Ashley,
And Robert L. Smathers

A. E. Extension Series No. 96-12

November 1996

The authors would like to thank all the companies and individuals who provided information for this publication. They would also like to acknowledge Maureen Riegger for her assistance in preparing this manuscript. Funds from the Idaho Potato Commission paid a portion of the survey costs on which this publication is based.

1996 Crop Inputs Cost Summary for Idaho

Paul E. Patterson, Patricia D. Ashley and Robert L. Smathers

Background

The objective of this publication is to provide producers, lenders, agribusinesses and University of Idaho researchers and Extension personnel with information needed to develop or modify traditional or alternative cost of production estimates.

The University of Idaho develops and publishes cost and return (CAR) estimates, also referred to as enterprise budgets, for many of the major crops grown within the state. These CAR estimates are revised every other year in odd numbered years. The latest revision was completed in the fall of 1995. Livestock CAR estimates are revised and published in even-numbered years. A list of current CAR estimates and information on how to order them is found on pages 15 and 16.

Because of the extreme variation in growing conditions throughout Idaho and the difference in crops produced and in crop production practices, crop costs and returns estimates are developed on a regional basis rather than on a state-wide basis. The four regional areas include: 1) Southwestern Idaho (SWI) with primary emphasis on Canyon and Elmore counties, 2) Southcentral Idaho (SCI) with primary emphasis on Jerome, Twin Falls, Cassia and Minidoka counties, 3) Southeastern Idaho (SEI) with primary emphasis on Power, Bingham, Bonneville, Madison, Fremont and Jefferson counties, and Northern Idaho (NI) with primary emphasis on Benewah, Bonner, Boundary, Clearwater, Kootenai and Latah counties.

Procedure

The information provided in this publication is the average cost reported for a given region. The data was obtained by confidential telephone and mail surveys conducted during June, July and August 1996. Sample selection was not on a random basis, nor was the sample stratified according to characteristics of the firms. The objective was to obtain information across each of the geographic regions, as well as from a variety of firms within a region. Firms with several outlets in a given geographic area were only sampled once.

The survey included five primary types of businesses or suppliers. These were 1) irrigation districts or canal companies, 2) aerial applicators, 3) agricultural lenders, 4) farm chemical and fertilizer dealers and 5) seed dealers. The number of companies who provided information by area is shown in Table 1. The price for seed potatoes was obtained from a survey of Idaho seed potato growers conducted by mail in June.

The cost of some crop inputs vary between areas of the state, primarily due to transportation, while other input costs vary more within a region than between regions. Inputs that vary little by region are found in Table 5. All other inputs are priced by area.

Custom Applications

A custom rate charge to apply chemicals and fertilizer is found in many of the crop CAR estimates. Table 2 contains aerial application rates which vary by the quantity of material applied. Application charges for liquid material tend to fall into the four size categories shown in Table 2: 3-gallon, 5-gallon, 7-gallon, and 10-gallon rates. Application of dry material is charged on a per pound basis. The minimum per acre charge on dry material is generally based on 100 pounds of material. Most custom aerial applicators have a sliding scale, charging less when a large acreage is involved. They also charge less when fields are large and easily accessible, compared to small or irregular shaped fields. The values in Table 2 reflect these differences.

Table 3 lists the cost of applying chemicals and fertilizer by various ground application methods. This data was obtained primarily from fertilizer and chemical retailers who also apply the product.

Water Assessments

An average water assessment charge per acre for each region is shown in Table 4. Assessments on a per share of water basis were converted to a per acre charge. All of the canal companies and irrigation districts included in Table 4 deliver water in an open ditch to the farmer.

The water assessments among the group surveyed in Southwestern Idaho ranged from a low of \$20.50 per acre to a high of \$31.00. The range in water assessments among the four water organizations in Southcentral Idaho ranged from \$19.50 to \$35.00 per acre. Water charges in Southeastern Idaho are considerably lower than the other two areas of southern Idaho, averaging less than half the cost of the Magic Valley and Treasure valleys. The water assessment among the four water organizations surveyed ranged from \$8.50 to \$12.00 per acre.

Interest Rates

Most agricultural lenders apply a risk rating to each customer. The more secure the loan, the lower the interest rate paid by the customer. Loan volume is also considered. A customer borrowing more money generally receives a more favorable interest rate. Rates also vary depending on whether the interest rate is variable or fixed over the loan period.

Operating loan interest rates among lenders surveyed ranged between 8.25 percent and 11.25 percent. A typical rate of 10.00 percent, shown in Table 5, should be used in the 1996 crop CAR estimates to calculate operating interest. This rate is for a fixed interest rate loan and assumes a low credit risk borrower with a moderate to high loan volume. Variable rate loans are on a prime plus basis. The interest component added to the prime rate ranged from .5 to 3.0 percent.

Interest rates on intermediate loans, money borrowed from one to five years, varied from 8.5 to 11.25 percent. The value of 10.5 percent, shown in Table 5, should be used in the 1996 crop CAR estimates to calculate interest on machinery and equipment. This rate assumes a fixed rate loan and a low credit risk borrower. The interest component on a variable interest rate loan ranged between .5 to 3.5 percent.

Other Input Costs

Tables 4 and 5 also include the costs for a variety of different inputs that do not fit one of the input specific categories found in Tables 6 through 12. A number of these items are specific to a particular commodity, such as cutting and treating potato seed. Others, such as fumigation, can apply to a variety of different crops.

The labor rates, shown in Table 5, are based on a 1993 survey of growers in southern Idaho, updated using the wage rate index found in USDA's "Agricultural Prices." The rates shown include a base wage rate, plus the employers payroll tax contribution and other benefits. The value of benefits varies by the class of labor.

The component fertilizer prices, shown in Table 4, can be used to revise cost estimates where fertilizer is specified by element, not by total pounds of material. Table 10 contains the price per ton of various source materials as well as the price per pound for micro nutrients. The component price will vary depending on the source material. The pre-plant nitrogen price in Table 4 is based on ammonium nitrate (34-0-0), post-plant nitrogen price is based on Solution 32 (32-0-0), dry phosphate price is based on 11-52-0 with the nitrogen valued at the price of nitrogen in ammonium nitrate, liquid phosphate price is based on 10-34-0 with the nitrogen valued at the price of ammonium nitrate, potash price is based on Muriate of potash (0-0-60), and sulfur is based on ammonium sulfate with the nitrogen valued at the price of ammonium nitrate.

Herbicide Costs

Table 6 shows the price per pound for dry material or the price per quart for liquid herbicides. The price of liquids was generally based on a 2-1/2 gallon container price. Prices were rounded to the nearest \$.05. While the list of herbicides is not all encompassing, it covers a wide range of products currently being used to control the more common weed problems on row crops, small grains and other crops for which the University of Idaho has developed budgets. Prices for alternative formulations was obtained when these were commonly applied in the area.

Fungicides Prices

Prices per pound or per quart for commonly used fungicides are found in Table 7. Price for the liquid materials was based on a price for 2-1/2 gallon containers. Prices were rounded to the nearest \$.05.

Insecticides and Nematicides Prices

Insecticide and nematicide prices for 1996 are shown in Table 8. Prices for dry material are per pound of material and for liquids the price is based on a 2-1/2 gallon container price. Prices were rounded to the nearest \$.05.

Surfactant Prices

Prices per quart for commonly used surfactants are found in Table 9. Prices for liquid materials are based on a 2-1/2 gallon container price. Prices were rounded to the nearest \$.05.

Fertilizer Prices

Table 10 contains the 1996 price information on fertilizers. The prices for the macro nutrients are per ton for the total material. The formulation of the various materials is also shown. Prices for micro nutrients (trace elements) are given per pound of element. Some caution is advised on the prices for the trace elements. The price variation was extreme and there may have been subtle but important differences in the source material that we were not aware of.

Seed Prices

Table 11 contains 1996 seed prices by region. Prices are per pound or per hundred weight, except for sugarbeets which is given on a per unit basis. Seed prices were obtained only for those crops for which the University of Idaho presently publishes a CAR estimate. *One thing to keep in mind is that there is a great deal of variability in seed prices, particularly among different varieties.* The seed prices in Table 11 should be considered representative, but they are by no means comprehensive.

Crop Insurance

Crop insurance rates vary considerably even within a fairly narrow geographic area. The variability is even greater when an entire region of the state is considered. The per acre crop insurance costs for the various crops, shown in Table 12, are calculated using "typical" insurance rates and crop values for 1996. Those typical rates and values were obtained from crop insurance companies in each region.

The insurance is based on hail-fire, not multiple peril. The values in Table 12 should not be used uncritically, however. Insurance rates reflect risk. Areas with high loss potential would need to use higher costs, while lower risk areas would use lower costs.

Costs and Returns Estimates

A list of Idaho crop and livestock CAR estimates currently available are found on page 15. These are listed by region, in the case of crops, and by type of livestock. CAR estimates can be ordered individually, by region or for the entire state, as shown on page 16. CAR estimates can also be obtained at county Extension offices as well.

Further Information

For additional information about publications and other resource materials available from the College of Agriculture, contact Ag Publications, University of Idaho, Moscow, ID 83844-2240 (885-7982).

If you have any questions or comments regarding the information contained in this publication, contact Paul Patterson at the Idaho Falls R & E Center, 1776 Science Center Drive, Idaho Falls, ID 83402 (529-8376).

EBB-CC4-96	Cow-Calf Summer on Public Range Winter Feeding Necessary
EBB-CC5-96	Cow-Calf Summer on Public Range Winter on Harvested Feeds & Crop Aftermath
EBB-ST1-96	Stocker; Wintered to go to Grass Bought in Winter, Sold in Fall
EBB-ST2-96	Stocker; Wintered to go to Feedlot Bought in Fall, Sold in Spring
EBB-ST3-96	Stocker; No Wintering Bought in Spring, Sold in Fall
EBB-FL1-96	Idaho Cattle Feedlot Calf to Slaughter; Concentrate Ration
EBB-FL2-96	Idaho Cattle Feedlot Yearling to Slaughter; Concentrate Ration
EBB-SR1-96	Sheep-Range: Ewes on Range, Lambs on Drylot Winter Feeding Necessary
EBB-SR4-96	Sheep-Range: Ewes and Lambs on Range Wintered on Alfalfa Pasture
EBB-SF1-96	Sheep-Farm Flock: Ewes on Pasture, Lambs on Drylot
EBB-SW1-96	100 Sow Farrow to Finish Total Confinement
EBB-SW3-96	150 Sow Farrow to Finish Semi-Confinement, Open Front Facilities

CROP AND LIVESTOCK COSTS AND RETURNS ESTIMATES ORDER FORM

On the previous page is a list of costs and returns (CAR) estimates available through the University of Idaho Department of Agricultural Economics and Rural Sociology. These same CAR estimates are also available on a diskette that can be used with the Enterprise Budget Worksheet Program.

To order: Check the appropriate box next to the items desired, or circle the publication number on the previous page and mail this order form and your check to:

Bob Smathers
Department of Agricultural Economics & Rural Sociology
University of Idaho
Moscow, ID 83844-2334

Make check payable to: Bursar, University of Idaho. Price includes postage.

*Idaho residents add 5% for sales tax.
