# Forest & Sustainable Products

## Recommended 4-Year Plan

### Design for the Future

Sustainability and innovation are key aspects of our degree in Forest and Sustainable Products. An important part of the University of Idaho for over 100 years and accredited by the Society of Wood Science and Technology, our B.S. in Forest and Sustainable Products trains students to create and design new products from bio-based materials, from wood to recycled materials. Through hands-on courses, our students apply what they learn in the classroom in our state-of-the-art laboratories in a variety of areas such as biofuel creation from wood waste, development of plastic-enhanced wood for construction, and innovative use of small-diameter trees. Our degree integrates business curriculum that prepares students to work in the wood products and renewable materials industry; a \$3 billion industry in Idaho. As a major in Forest and Sustainable Products, students take advantage of course work in five career tracks: Bio-Energy, Bio-Based Materials, Construction & Design, Materials Acquisition & Supply, and Forest and Sustainable Product Business Management. Students can also customize their education based on individual career goals.
