# **CHEMICAL ENGINEERING**

Design efficient chemical processes to build a better world around you. Decrease pollutants, purify water, end disease and poverty, manufacture better pharmaceuticals, refine chemicals, process food, and refine oil and other petroleum products.

## **ABOUT YOUR DEGREE PATH**

Chemical Engineering majors build a strong foundation in chemistry, math, and physics courses during their first two years. Upper division courses will teach you how to apply these principles to engineering applications and prepare you to design your own solutions to many of the world's chemical, biological and material challenges.

Chemical engineering jobs are in high demand. There is a variety of work available, including in energy resources, environmental protection, biotechnology, medicine, textiles, food products, agricultural products, combustion processes, electronic materials, pulp and paper, chemical manufacturing, oil and gasoline, and more.

# MATCH YOUR

- Environmental Protection and Natural Materials
- Water Treatment
- Medicine and Pharmaceuticals
- Energy Resources
- Aerospace
- Agricultural Products
- Computer Chips
- Electricity and Conductivity
- Nuclear Materials
- Polymers and Plastics
- Food and Chemical Processing
- Petroleum
- Magnetics
- Pulp and Paper
- Packaging and Formulation

### YOUR DEGREE IS ACCREDITED

Our undergraduate Chemical Engineering program is accredited by the Engineering Accreditation Commission of ABET, www.abet.org.
