

Library Re-Roof

Project to replace the existing roof system at the Library. The existing roof on the University of Idaho Library is a ballasted single ply system dating to 1993. The roof is 26 years old. The roof area is approximately 45,000 gsf. The roof is now failing at multiple points and must be patched both annually and after major storm occurrences. Designed by H2A Architects and the successful contractor is Dri-Con, Boise, ID. The notice to proceed issued for May 4th, for a completion date of August 2nd, 2020.
