

# Seed Potato Building

A new lab facility, designed by CKA Architects, will address greater demand for plantlets and mini-tubers than current capacity allows, increasing production by three times in the next five years. The increase in revenue will keep the facility on the cutting edge of technology in addition to supporting student training and education through internships. The site plan has been developed to account for the Seed Potato facility while still providing ample room for the future new Meat Science and Innovation Center. Construction began August 24<sup>th</sup>, with completion expected 2021. [Live video](#) of the construction site is available.

The new facility was made possible by support from the Idaho Potato Commission, Northwest Farm Credit Services, private donors and the State of Idaho.
