I. INTRODUCTION

On April 23, 1904, Ethan A. Hitchcock authorized the Minidoka Project along the Snake River in Idaho and Wyoming in his capacity as the Secretary of the Interior. As a consequence of that action, nearly two decades later, a local farmer named DeWitt Garrison Brown would have most of his homestead condemned by the United States Government in order to complete a dam in American Falls, Idaho. DeWitt refused to concede the 120 acres sought by the United States, and challenged the condemnation (both, the legal right of the United States to take the property, and the United States’ valuation of his property) in court. Other members of the community had accepted payment, or chose to stop fighting condemnation, but not DeWitt.

Specifically, DeWitt challenged the subsequent sale of his condemned land by the United States to property owners whose land would be flooded in the private marketplace; essentially, the United States acting as a real estate brokerage. While he defiantly won more money than was offered in negotiations at a jury trial, plus interest, he lost the legal challenge to the United States’ authority to condemn his property at both the District and Supreme Court.

Decided early in “public use” jurisprudence, Brown v. United States provides a primitive view of the broad scope of “public use” and paved the way for future public works across the United States. The ideas presented in Brown were novel. As Chief Justice Taft said in the Court’s opinion, “[t]he circumstances of this case are peculiar. An important town stood in the way of a necessary improvement by the United States.” Brown represents a 20th century version of the biblical tale of David and Goliath. The local farmer performed nobly as David, but in a surprise twist on the original story, Goliath won the day. This article will discuss the background of how the United States promulgated their plan to build the dam in American Falls, follow the significant characters that were in the story, articulate the legal context and decisions giving the United States the ability to condemn DeWitt’s property, and the aftermath of a broad interpretation of “public use.”

II. THE PATHWAY TO AMERICAN FALLS RESERVOIR

A. The Bureau of Reclamation

The Bureau of Reclamation was created by the Reclamation Act on June 17, 1902. Its creation was championed by President Theodore Roosevelt. President Roosevelt believed that if water reclamation projects were completed, the arid western United States could better support farms and homes. Born of the early 20th century, the Bureau of Reclamation approved 70 of its 180 projects prior to World War II. One of those approved projects was the Minidoka Project along the Snake River in Wyoming and Idaho. It was expected that the users of the water that would be provided by these projects were expected to repay the construction costs, not the general taxpayer. After all, the local farmers were the beneficiaries of such projects.

Today, the Bureau of Reclamation operates 338 reservoirs that store 140 million acre-feet of water; enough for 140 million families of four. Reclamation also provides 20% of the water in the western United States for farmers. These western farmers maintain 10 million farmland acres, and produce 60% of the United States’ vegetables, and 25% of its fruit and nuts. Finally, Reclamation provides 10 trillion gallons of water to upwards of 31 million people each year. It seems safe to say that President Roosevelt was correct in his assessment of what regulated water could accomplish for the western United States.

B. Minidoka Project

The Bureau of Reclamation performs the goals mentioned above by managing “projects.” One of the 180 approved projects was the damming of the Snake River in Wyoming and Idaho, named the Minidoka Project. In order to evaluate the Snake River for its irrigation potential, the Secretary of the Interior, Ethan A. Hitchcock, removed irrigable land from public entry in November of 1902. Later that year, surveyors conducted inspections, and D.W. Ross, Reclamation’s District

Engineer in Idaho, recommended to Secretary Hitchcock to proceed immediately with work along the Snake River. Secretary Hitchcock approved the Minidoka Project on April 23, 1904, and allocated $2.6 million (approximately $77 million in current dollars) to the Project.

The Project began work immediately, commencing with a dam in Minidoka, Idaho in late 1904, with it being completed in October 1906. Labor for the Minidoka Dam came principally from immigrants. This was not because the work was especially dangerous or hazardous, rather, the local workers produced sub-par results. The Minidoka Project was ambitious and revolutionary, being one of the first Reclamation projects to use hydroelectric power.

The next dam authorized by the Project was Jackson Lake Dam in modern day Teton National Park, Wyoming. A temporary dam was installed in 1906, but the wood rotted and burst. A permanent dam was approved in 1910, and completed several years later (due to the short work season—only three months per year) in 1916.

31. STENI, supra note 1, at 9–10.
C. The Sundry Civil Appropriation Act

After the completion of Jackson Lake Dam, there was a lull in construction within the Minidoka Project. In fact, no further construction projects were attempted until the passage of the Sundry Civil Appropriations Act. On March 4, 1921, the Sundry Civil Appropriations Act was passed, allocating $1,735,000 (nearly $25 million in 2019) to assist with the Minidoka Project along the Snake River. The relevant portion of that law provides:

Minidoka project, Idaho: For operation and maintenance, continuation of construction, and incidental operations, with authority in connection with the construction of American Falls Reservoir, to purchase or condemn and to improve suitable land for a new townsite to replace the portion of the town of American Falls which will be flooded by the reservoir, and to provide for the removal of buildings to such new site and to plat and to provide for appraisal of lots in such new town site.

---

33. STENE, supra note 1, at 10.
34. Id.
and to exchange and convey such lots in full or part payment for property to be flooded by the reservoir and to sell for not less than the appraised valuation any lots not used for such exchange, $1,735,000, together with the unexpended balance of the appropriation for this project for the fiscal year 1921.\textsuperscript{36}

The Bureau of Reclamation’s next objective was clear; a dam would be built on the Snake River in American Falls, Idaho.

III. THE CONDEMNATION OF DEWITT GARRISON BROWN’S HOMESTEAD

A. DeWitt G. Brown & Roosa H. Calkin

Figure [2] - DeWitt Brown’s photograph from Purdue University in 1898.

The case’s principal namesake,\textsuperscript{37} DeWitt Garrison Brown, was born on June 27, 1875, in Traer, Iowa to Garrison and Elizabeth Brown.\textsuperscript{38} His father, Garrison, was a physician.\textsuperscript{39} At some point prior to 1900, his family had moved from Iowa to

\begin{flushright}
\textsuperscript{36} Transcript of Record, supra note 6 at 53. \\
\textsuperscript{37} The case is formally titled as Brown, et al. Roosa (DeWitt’s spouse) was the other party. \\
\end{flushright}
Iroquois County, Illinois. They settled into a very small town called Crescent City, nearly 325 miles away. DeWitt would later attend Purdue University and graduate with degrees in pharmacy in 1898. While he was working as a drug clerk in the summer of 1900, he married Roosa H. Calkin. Roosa was born in May 1879 to Samuel and Adilade Calkin. The Calkins were a family of farmers in the same town, Crescent City, Illinois.

At the time of the 1900 Census, both families lived near Crescent City. According to the 1900 Census, the population of Crescent City was 371 people. It would be fair to conclude two facts central to this story. First, due to the small rural town, DeWitt would have been familiar with farming. Second, that the Browns and Calkins would likely have known each other.

DeWitt and Roosa were married on June 26, 1900. Over the course of their marriage, the couple would have at least two sons, Fay and Monroe. Additionally, the young couple also had a deceased child who is not named or identified by gender. Roosa was a public-school teacher, and she would continue that profession through most of her life.

Sometime after they were married, but prior to 1910, the young couple (DeWitt being twenty-four, and Roosa being twenty) moved to Idaho. Although there is no documentation to ascertain why DeWitt and his wife moved to Idaho, the author would like to suggest that DeWitt had designs of running his own drug store. Whatever his motivations were for moving to Idaho, DeWitt began a life of farming. Shortly after moving to Idaho, DeWitt was granted a homestead of 160

acres on June 5, 1911. In a strange series of events, the President who had signed his homestead, William H. Taft, was the future Chief Justice of the Supreme Court who wrote the decision in favor of the United States, taking most of DeWitt’s homestead away.

DeWitt listed his profession on his World War I Registration Card as a self-employed farmer when it was completed on September 12, 1918. When the Minidoka project was approved, DeWitt embodied the “American Dream.” A brown-hair, blue-eyed young man of medium height and build, had been granted a homestead and brought his young family to the American West, and became a self-employed farmer. The Brown family was exactly who President Roosevelt wanted to attract to the western United States.

B. Condemnation Action by the United States

In a letter from the First Assistant of the Secretary of the Interior, E.C. Finney, to the United States Attorney General, dated April 21, 1921 (only a month after receiving the substantial influx of money from the Sundry Appropriations Act), the United States made its claim to DeWitt’s property. It stated:

Under the authority of the National Irrigation Act of June 17, 1902 (32 Stat. 388), and acts amendatory thereof or supplementary thereto, the United States Reclamation Service is now engaged in work preliminary to the construction of a large dam across the Snake River at American Falls, Idaho, which dam is intended to be used in connection with an extension of the Minidoka Federal Irrigation project.

The proposed reservoir would flood a major portion of the land now included within the corporate limits of the City of American Falls, a town of about 1,500 people. Our plan is to develop a new town just outside the limits of the present town and above the high-water line of the proposed reservoir, purchasing or condemning the lands within the submerged area, and, where practicable, making an exchange of lots and removing houses and other improvements from the old town site to the new town site. An adjustment of this kind would permit the Government to secure the required area for the reservoir at much less expense than would otherwise be the case, and consequently would

56. Id.

make the construction of the reservoir more feasible through a reduction of the cost.\textsuperscript{60}

Condemnation proceedings were undertaken by the United States using the justification provided by Mr. Finney. But, DeWitt challenged the right of the United States to condemn his land for town site purposes.\textsuperscript{61} DeWitt’s homestead was a large portion of the new townsite—the new version of American Falls.\textsuperscript{62} The United States’ aim was to provide low-price property for the residents of American Falls who were forced to move, but that goal induced DeWitt Brown and his attorneys into the belief that this was not a valid “public use” of the taking of his homestead.\textsuperscript{63} Approximately three months after the Sundry Act passed, in June 1921, DeWitt was served the summons for the condemnation of his property.\textsuperscript{64}

\begin{figure}[h]

\includegraphics[width=\textwidth]{figure3.png}
\caption{A detailed look at DeWitt Garrison’s homestead. The three boxes on the left-hand corner were his original 160 acres. The previous townsite has been flooded and cannot be seen in this map.\textsuperscript{65}}
\end{figure}

C. Negotiations & Valuation

As noted in the record, attempts were made to negotiate the transfer of DeWitt’s property to the United States.\textsuperscript{66} The government had previously acquired

\begin{itemize}

\end{itemize}
495 acres and needed DeWitt’s 120 acres to complete the new townsite. In the course of the case, the dispute went to a jury trial over the value of the property. Although DeWitt was chiefly concerned with the government’s ability to legally take the 120 acres of his homestead, he had to have been very concerned about the fact that he was being offered 12.5% of fair market value (according to his valuation). In fact, DeWitt’s attorneys asked the Supreme Court, that in the event that the Court decided that the land could be condemned, that the Court give DeWitt his valuation. To quote DeWitt’s attorneys, “[that] in case the Court should determine that the plaintiff is entitled to condemn the land of these defendants, that these defendants to have judgment against the plaintiff for the true value thereof, namely: Twenty-four Thousand ($24,000.00) Dollars, and for costs of suit.”

The difference between the government’s valuation and what DeWitt saw as reasonable was a significant disagreement amongst the parties. In today’s money, the difference was nearly $350,000 vice $43,000. For DeWitt and his family, this valuation was the difference between starting a new life or barely scraping by.

Unfortunately for DeWitt, the latter occurred. Assuming that the government had no money on the balance sheet for the Minidoka Project beginning in fiscal year 1921, the asking price of $24,000 represented 1.3% of the money available to the government at the time of condemnation. The Sundry Act provided money specifically for land acquisition and had nothing to do with the construction of the dam. Instead of spending from June, 1921 until November 12, 1923 in litigation, the government could have simply paid the demanded amount. The fact that the parties engaged in litigation over this acreage for two and a half years demonstrates the dedication that both sides possessed. The United States clearly thought that what the government was doing was permissible and necessary. DeWitt on the other hand, believed that the government had gone beyond its constitutional power.

IV. THE LEGAL CHARACTERS

A. Attorneys for DeWitt & Roosa Brown (Joseph H. Petersen & Thomas C. Coffin)

Mr. Petersen and Mr. Coffin represented the Browns throughout the proceedings, all the way to the Supreme Court.\(^{79}\) Their office was located in Pocatello, Idaho.\(^{80}\) In the American Bar Association directory for 1922, Peterson & Coffin had clients listed in Illinois, Colorado, Minnesota, and Utah.\(^{81}\) Both men were highly educated attorneys, Peterson graduated from Columbian University Law School (which would become George Washington University in 1904), and Coffin from Yale Law School.\(^{82}\) After receiving their education, both men served the state of Idaho in the attorney general’s office, where presumably they met and decided to branch out on their own in Pocatello, Idaho.\(^{83}\)

Joseph Hans Petersen was born in 1880 in Plain City, Utah.\(^{84}\) He performed a religious mission for The Church of Jesus Christ of Latter-Day Saints from 1900-1901 based in Baker, Oregon.\(^{85}\) As noted above, Joseph attended Columbian University Law School (George Washington University) and graduated with his degree in 1905.\(^{86}\) After graduating and being admitted to the bar in Idaho, Joseph became an assistant attorney general.\(^{87}\) He would remain in that position from 1906-1912, until he would become Idaho’s attorney general.\(^{88}\) Joseph served as Idaho’s attorney general from 1913-1916.\(^{89}\)

Figure [4] – Thomas Coffin’s photograph from his ancestry entry.

Thomas Chalkley Coffin was born on October 25, 1887, in Caldwell, Idaho. While he was young, his family moved to Boise in 1898. Eventually, Thomas graduated from Yale in 1910 with a degree in law. In 1911, Thomas was admitted to the bar and began practicing in Boise. In 1912, Thomas served as an assistant county attorney. From 1913-1915, Thomas served as an assistant attorney general. After his time in the attorney general’s office was completed, Thomas moved to Pocatello, Idaho. Unfortunately, World War I would interrupt his legal practice. He served in Naval Aviation in Pelham Bay, New York. Upon completion of his service, Thomas would return to Pocatello and continue practicing law.

B. Attorneys for the United States (William W. Dyar & James M. Beck)

Appearing on behalf of the United States was James M. Beck, the Solicitor General, and a public lands division attorney from the Department of Justice William W. Dyar. Mr. Dyar was a quiet public servant. Unlike the other attorneys in this case, information concerning significant details about his life is limited. The only information uncovered for this article is contained in a Department of Justice directory that listed William W. Dyar in the public lands division with an annual salary of $4,500.

Mr. Beck, on the other hand, was in the public eye for nearly three decades. James Beck was born in Philadelphia, Pennsylvania on July 9, 1861. After graduating from Moravian College in Bethlehem, Pennsylvania in 1880, James worked as a clerk for a railway company. While gainfully employed during the day, James studied law at night and eventually was first admitted to the bar in 1884. James had an incredible career, serving as Assistant United States Attorney in the eastern district of Pennsylvania and as the United States Attorney for Pennsylvania. James was nominated to become the Attorney General of the United States in 1900 by President William McKinley, where he served in the capacity from 1900-1903. Afterwards, he was in private practice based out of Philadelphia, New York City, and Washington D.C. In 1921, he was appointed by President Warren Harding to serve as the Solicitor General and held that post until he resigned in 1925. Following his time as the Solicitor General, James ran for Congress and was reelected several times. James resigned from Congress on September 30, 1934 and quietly passed away on April 12, 1936.

C. The Supreme Court & Chief Justice Taft

The Supreme Court in 1923 was headed by Chief Justice William Taft. Chief Justice Taft was born in Cincinnati, Ohio, on September 15, 1857. He attended Yale for undergraduate work, graduating in 1878. Fiercely loyal to Ohio, he returned to Cincinnati and completed law school at Cincinnati Law School in

113. Id.
1880. He began his career as a prosecutor and judge in Ohio, followed by an appointment as the Solicitor General of the United States in 1890. Following that appointment, Chief Justice Taft was destined for high office, serving President Roosevelt as his Secretary of War, then elected as President in 1908. Upon leaving the White House, Chief Justice Taft taught at Yale and routinely traveled the lecture circuit. Finally, in 1921, President Warren Harding nominated Chief Justice Taft to the Supreme Court. He was confirmed on the exact same day, June 30, 1921. Chief Justice Taft has been the only person in the history of the United States to be both President and a justice on the Supreme Court. However, being a Supreme Court justice seemed to be more important to Chief Justice Taft as he is quoted as saying, “I don’t remember that I ever was President.”

V. EMINENT DOMAIN & “PUBLIC USE”

The concept of “eminent domain” is born out of the idea that sovereigns have the ability to repossess the land within their territory for any purpose that the sovereign deems necessary. In the United States, however, the Fifth Amendment to the Constitution is a limiting principle. That limitation on federal power provides, “nor shall private property be taken for public use, without just compensation.”

The first significant case that came before the United States Supreme Court regarding this power was Kohl v. United States. In that case, the landowner was challenging the condemnation of his land in Ohio to use as a custom house and a post office. The Court held that the government’s ability to exercise this power was “essential to its independent existence and perpetuity.”

Eminent domain has been used in our country’s history to facilitate transportation, supply water, construct public buildings, and assist with defense capabilities. Another purpose for eminent domain occurred with the

126. Id.
condemnation of land near Gettysburg, Pennsylvania—recreation. Following on the heels of Gettysburg was the creation of a park within Washington D.C. that was twice the size of New York City’s Central Park, Rock Creek Park. The Supreme Court upheld the constitutionality of recreational condemnations in Shoemaker v. United States.

All of the above had one thing in common: direct public benefit. Who doesn’t want railways or recreation? The town site in Brown, however, was truly a novel idea. The United States had never before condemned land that they were not going to own, keep, or maintain.

VI. THE LITIGATION PATH OF BROWN

A. District Court (Condemnation as a Matter of Law)

Before the case went to jury over valuation, the circumstances of the condemnation were tried before United States District Court Judge Frank S. Dietrich. Judge Dietrich heard testimony from an engineer that the United States planned to use the land for worker lodging, however he concluded that the only authority for the action came from the letter issued by Mr. Finney (using the land as a new town site). It was important to note that DeWitt and his attorneys were not challenging the right of the government to build a dam, or to condemn land needed for that purpose. This case was about whether or not the government could condemn private land to provide a town site.

Judge Dietrich reasoned that because the Sundry Act was passed and money was allocated to alleviate land issues in American Falls, the legislature had declared the usage public. Although he stated that the judiciary was the final voice on “public use,” he would defer to the legislature in this circumstance. Although he was concerned that the government did not have the express authority to condemn this property, he thought it was close enough to allow the government to proceed.

Judge Dietrich continued to reason that because landowners had to be paid “just compensation,” the likelihood of abuse was low, saying specifically, “the amount must be raised by taxation where the land is taken by the government itself, there is not much ground to fear any abuse of the power.” In Judge Dietrich’s view, the fact that Congress was accountable to the people would result

in a limited use of condemnation or abuses thereof.\textsuperscript{140} In his conclusion, Judge Dietrich stated that “it may have been fairly concluded that, without such authority, it would be impracticable for the Reclamation Service to execute the reservoir project.”\textsuperscript{141} On February 10, 1922, it was decided that DeWitt Brown was going to lose his homestead.\textsuperscript{142}

Further, the American Falls Press stated on February 17, 1922:

The validity of the act under which condemnation of property wanted for the building the great American Falls dam by the federal government is made was upheld Monday by Federal Judge F.S. Dietrich. Judge Dietrich ruled in the case of the United States against DeWitt Garrison Brown of Power County. The government by exercising the right of eminent domain is seeking to acquire in fee simple to 120 acres of land near American Falls which is deemed necessary in the program of building the dam and making a new townsite.\textsuperscript{143}

It seems clear from this contemporary account, as well as Judge Dietrich’s opinion, that this particular issue had not been subjected to enough litigation throughout the country as to provide a common understanding of what constituted “public use” in condemnation proceedings. The only remaining question after Judge Dietrich’s decision was, how much would the government pay DeWitt for his homestead? Surely the government would pay DeWitt “just compensation” as to not abuse their authority in taking his land, just like Judge Dietrich concluded.\textsuperscript{144}

\textbf{B. District Court (Jury Valuation)}

On March 15, 1922, the case went before a jury in Idaho to determine the amount of damages that DeWitt and Roosa suffered as a result of the condemnation of their homestead.\textsuperscript{145} Naturally, both the United States and the Browns were represented.\textsuperscript{146} The Idaho Attorney General and the Power County Attorney also were in appearance.\textsuperscript{147} The state of Idaho had an interest in the property due to a mortgage for $1,500, while Power County had a small tax lien.\textsuperscript{148} In fact, DeWitt had not paid Power County its taxes for 1920 and 1921.\textsuperscript{149} Ultimately the matter was resolved with the jury valuation of $6,250.\textsuperscript{150} The Idaho Republican ran the following entry on March 23:

\begin{itemize}
\item \textsuperscript{140} Id.
\item \textsuperscript{141} Id.
\item \textsuperscript{142} Id.
\item \textsuperscript{143} Condemnation Privilege [sic] of Reclamation Service Uphead by Feder Judge Deitrich, AM. FALLS PRESS, Feb. 17, 1922 (on file with author at https://bit.ly/3uGU5lQ).
\item \textsuperscript{144} Brown, 279 F. at 171.
\item \textsuperscript{145} Transcript of record, supra note 6 at 17.
\item \textsuperscript{146} Id.
\item \textsuperscript{147} Id. at 18–19.
\item \textsuperscript{148} Id. at 19.

\item \textsuperscript{150} Id. at 17.
\end{itemize}
The federal court spent practically the entire day Wednesday [March 15, 1922] in hearing the case of the United States vs. DeWitt Garrison Brown et al, a condemnation case on land involved in the proposed American Falls reservoir project. The case was given to the jury at 5 [p.m.] and after deliberating for approximately six hours, it returned a verdict awarding the defendants the sum of $52 per acre for the land involved. The original sum asked for by the defendants was $200 per acre.\textsuperscript{151}

Finally, Judge Dietrich assessed 7\% interest to the United States from June 1921 until March 15, 1922.\textsuperscript{152} A result of $328.27 was added to the $6,250 that the jury assessed, and judgment was entered.\textsuperscript{153} Unfortunately for DeWitt, the mortgage took $1563.33 (with added interest) and his tax obligation was $41.52.\textsuperscript{154} By the time DeWitt received his compensation, it was reduced to $4,973.27.\textsuperscript{155} That value represents 20.7\% of market value, according to DeWitt.\textsuperscript{156}

C. Supreme Court

The case arrived directly to the Supreme Court without going to an intermediate appellate court through a provision in the Judicial Code at the time. Chief Justice Taft stated:

The plaintiffs denied the power of the Congress under the Federal Constitution to condemn the land because [sic] not taken for a public use. This entitled them to come to this Court under § 238 of the Judicial Code; and so the United States sued out a cross writ of error to question the legality of including in the judgment the interest item.\textsuperscript{157}

i. Argument for DeWitt Brown

DeWitt’s argument hinged on the definition and scope of “public use.” DeWitt’s principal argument was this:

The Government, after the condemnation of the land in question, if it is permitted, cannot be compelled to sell the land. The public at large would have no interest in the land. A person whose land has been condemned in the old town site would have no vested right in the land condemned in the new town site. The price to be charged by the Government for land which remains after it has concluded its exchanges is to be at the Government’s option, for such price as the Government may desire, to such persons as it may desire to sell. In

  \footnotetext[156]{Id. at 19-20.}
  \footnotetext[157]{Brown v. United States, 263 U.S. 78, 80 (1923).}
\end{footnotes}
condemning this land the Government does not desire to retain it but
to dispose of it and this disposition to the public is not, and cannot be,
a public use.158

The idea of the United States pretending to be a good-willed real estate broker
greatly concerned DeWitt’s attorneys. The public largely had to rely on the
Government doing what they promised, which is not written in the text of the Fifth
Amendment. Troubling for DeWitt, his attorneys could not point to any particular
case before the Supreme Court, stating “[w]hile we have not found a case where
the United States Government itself has undertaken to condemn property for
private uses and purposes analogous to the case at bar, yet the Government is
governed by the same doctrines and rules of law that apply to lesser governmental
instrumentalities.”159

ii. Argument for the United States

The United States’ major contention was obviously that this condemnation
was within the scope of their authority. The United States brief used the Gettysburg
decision to describe that “[w]hen the sovereign itself seeks to exercise the power
of eminent domain the presumption that the intended use is a public one is much
stronger than in cases where private corporations seek to condemn under authority
delegated to them by the sovereign.”160 The United States contended as well that
while the question of what is “public use” is a judicial one, the legislature acts on
behalf of the public, and if the legislature deems something justified, it is for the
public benefit.161 The United States clarified that “[u]nder these circumstances
Congress apparently felt that there was a moral obligation on the Government to
provide [the residents of American Falls] with a new town site where, by the
appraisal of lots in advance and their exchange or sale by Government officials, they
would be protected . . . .”162 Just like the Browns, the United States had trouble
pointing to any particular case that helped their cause as well.163

iii. Decision

Again, the novelty of the situation presented the Court with a difficult
decision: accept the Brown’s argument and cost the United States a significant
amount of money and time, or deny the Brown’s claim and trample on private
landowner rights that were foundational to the United States of America. Chief
Justice Taft wrote the opinion for the Court, with no dissenting opinions being
registered.164 Chief Justice Taft began his analysis by discussing a legislative act that
would create a railroad.  

Logically, the railroad project would need to condemn land adjacent to the right-of-way in order to build up the embankments or other components of the railway. He stated, “[t]he purchase of a site to which the buildings of a town can be moved and salvaged and the dispossessed owners be given lots in exchange for their old ones is a reasonable adaptation of proper means toward the end of the public use to which the reservoir is to be devoted.”

It seemed to Chief Justice Taft that the plan for the United States to act in this manner was the only viable option to accomplish the task before Reclamation. Chief Justice Taft believed that everyone in this situation was aggrieved, he said “[a] town is a business center. It is a unit. If three-quarters of it is to be destroyed by appropriating it to an exclusive use like a reservoir, all property owners, both those ousted and those in the remaining quarter, as well as the State, whose subordinate agency of government is the municipality are injured.” He then illustrated the “substitution” theory of compensation by stating that “[a] method of compensation by substitution would seem to be the best means of making the parties whole. The power of condemnation is necessary to such a substitution.” Chief Justice Taft struggled to find any case that would assist his assessment of the case. He did, however, rely on a case cited by the United States concerning a railroad company. In that case, the railroad company condemned private land to provide the public access to a highway, since the railway had just taken over the previous access, and the right-of-way was no longer open to the public. Chief Justice Taft seemed satisfied with what was occurring in Brown was the most fair thing to do for everyone involved. DeWitt Brown would surely disagree, but he was going to lose his homestead. On the bright side, Chief Justice Taft did allow the United States to be assessed interest.

VII. MOVING AMERICAN FALLS & DAM CONSTRUCTION

A. How Do You Move a City?

After acquiring the acreage needed to relocate the town, the overarching question was, how in fact do you move a town? The answer is, carefully and methodically. Luckily for the community, Reclamation was able to move many of the large structures from the old town site to their new locations. Some structures were relocated at the owner’s expense. The largest buildings that

175. Id.
were moved were the Grand Hotel and grain elevators. Since four-fifths of the town was going to be submerged, it wasn’t possible to save every structure. This tedious work began in the spring of 1925.

Figure [S] – A historic photo of a church being moved. The basic “how to” was to raise the structures up on logs and then pull the logs with a tractor or other machinery.
Over the course of a year, at a cost of $3 million, the Minidoka Project moved forty-six businesses, three hotels, a school, at least five churches, a hospital, six grain elevators, a flour mill, and various shacks and sheds.\textsuperscript{182} On average, it took a day to move a home, and two to three days to move the larger buildings.\textsuperscript{183} Imagine the expense had the government not condemned DeWitt’s land to put the new town. The government would have had to move buildings further, taking more time and money to accomplish this task.

B. American Falls Dam

Construction of the American Falls Dam began in 1925 after the Utah Construction Company received the Reclamation contract.\textsuperscript{184} Initially, Utah Construction began on the east side of the dam and would lay the foundation for the western section in 1926.\textsuperscript{185} Several grain elevators were not moved until late May 1926.\textsuperscript{186} A little later that year, on July 29, the “moving road” across the Dam construction site was closed.\textsuperscript{187} The Dam was completed sixty days ahead of schedule on April 21, 1926.\textsuperscript{188}

\end{itemize}
VIII. THE FALLOUT

A. “Public Use”

While it is easily understood that a landowner must receive “just compensation” and litigation over valuation has been extensive in condemnation proceedings, “public use” has been litigated very rarely. Several cases have been critical in understanding this issue, but without any definitive rules. In 1984, the Supreme Court decided *Hawaii Housing Authority v. Midkiff*. In that case the state government of Hawaii passed a law that would transfer title from lessors to lessees. The government sought to increase the amount of real estate owners by breaking up a concentration of ownership. A unanimous Court held that determining “public use” was better left for the legislature.

In 2005, the Supreme Court held in a 5-4 decision in *Kelo v. City of New London*, that the taking of private land to transfer it to a private developer in order to further “economic development” was “public use.” A few cases cite *Brown* for the proposition that “just compensation” could be land, rather than currency – the so called “substitute-facilities doctrine.” A thorough discussion of that principle is contained in *United States v. 50 Acres of Land*. Further, it is cited in *Dohany v. Rogers* as well, stating that a condemnation of a railroad right-of-way as part of a public highway improvement was permissible. All of these cases in context leaves a question: what can’t the United States do in an eminent domain proceeding?

B. The Human Impact

Just before his land was taken and he was defeated in court, DeWitt ironically became an assessor for Power County (he did not plant a crop in 1921 due to the uncertainty around his land). He continued in that profession through at least 1935. By April 25, 1940, and as early as 1939, DeWitt and his wife had moved to Ada County (Boise) and began living with their son, Fay. After moving to Boise,
DeWitt was employed as an office clerk for Ada County making $1,200 a year.\textsuperscript{200} DeWitt would pass away a few years later at St. Luke’s Hospital in Boise, Idaho on December 29, 1943.\textsuperscript{201} He endured a one-hundred-day stay at the hospital and appeared to have died from a heart condition.\textsuperscript{202} Roosa would outlive her husband, and would subsequently die in 1954.\textsuperscript{203} Roosa and DeWitt were buried at the same cemetery in Boise with very simple markers.\textsuperscript{204} Had DeWitt and Roosa been given their demand for their acreage, who knows where they would have gone. As it stands, the once self-employed farmer with 160 acres, died a government worker living with his son and daughter-in-law.

Shortly after \textit{Brown}, Thomas Coffin was elected mayor of Pocatello from 1931 to 1933.\textsuperscript{205} Additionally, Thomas would represent southeast Idaho in the United States Congress, beginning on March 4, 1933.\textsuperscript{206} Unfortunately, Thomas would serve a little more than a year before he was killed by a taxicab just off the steps of the United States Capitol on June 8, 1934.\textsuperscript{207} Joseph Peterson practiced law in Pocatello for approximately twenty more years.\textsuperscript{208}

IX. WHY THIS STORY MATTERS

A. Challenging the Actions of the United States

In the Bible, David wins. In \textit{Brown}, Goliath wins. Understanding who DeWitt Brown was frames exactly why he was upset with the United States enough to take this case to the Supreme Court. It was only a decade after DeWitt received his homestead that it was taken from him.\textsuperscript{209} During the interim decade, how much money had DeWitt and his family spent on his homestead?—not to mention the amount of labor he must have poured into his property.

Remember, this is \textit{prior} to the construction of the reservoir and its irrigation plan.\textsuperscript{210} Conversely, understanding how important DeWitt’s 120 acres were to the Minidoka Project is crucial.

Without DeWitt’s 120 aces, there would have been a substantial portion of American Falls that would have been displaced with nowhere else to call home.\textsuperscript{211}

\end{itemize}
For the rest of American Falls, DeWitt could have been seen as a thorn causing unnecessary trouble. Contemporaneous newspaper accounts declared in a headline the “VALLEY STANDS TOGETHER FOR DAM.” Further, had DeWitt won his challenge, he would have been in possession of 120 acres of prime real estate.

This case was not an incredibly newsworthy episode, nor was the opinion drafted by Chief Justice Taft extensive. To illustrate this point, the case was in the Idaho Attorney General’s report for 1921-1922, when the case was at the District Court. However, the same publication did not even list the Supreme Court decision the next year. Similarly, Chief Justice Taft’s papers located at the Library of Congress make no mention of this case to any of his colleagues. Ultimately, the innovative idea that was contrived by the United States was seen as a win for everyone but DeWitt Brown. As Chief Justice Taft stated, “an important town stood in the way of a necessary improvement by the United States.”

Today, American Falls Reservoir is a critical component of the irrigation, recreation, and settlement of southeast Idaho. While DeWitt did not view the taking of his homestead as a “public use” for the new townsite, all of southeast Idaho now benefits from having an abundant source of water available to the residents. At its capacity, American Falls Reservoir is the largest reservoir on the Snake River. Additionally, it is also the largest reservoir in the state of Idaho. In addition to the irrigation and drinking water, American Falls Reservoir provides abundant recreational activities. The reservoir is stocked with fish, has boating activities, and offers camping sites. DeWitt’s struggle for his 120 acres has a powerful lesson for landowners. The United States has incredibly broad power in determining whether or not to exercise eminent domain. Knowing the rest of the story illuminates how and why this case came before the Supreme Court. It also further illuminates the complex issues involved in taming the American West, the perils of land ownership, and the unapologetic sovereignty of the United States.

213. See infra Figure 8. The new town was built right on top of DeWitt’s farm.
216. William H. Taft Papers, Library of Congress, https://www.loc.gov/collections/william-howard-taft-papers/ (last accessed Mar. 29, 2021). The author looked at every letter and writing from September 1923 to November 1923 to each of the justices on the Supreme Court at the time. While Chief Justice Taft wrote many different letters, none of them were concerned with the 120 acres at issue.
217. I think the American Falls Press Headline “Valley Stands Together For Dam” is a strong indication (combined with the sale / acquisition of the amount of acreage) that the majority of people in American Falls wanted the dam. This also is the realization of President Roosevelt’s vision for Reclamation.
