TO ALL TO WHOM THESE PRESENTS SHALL COME:

University of Idaho

Whereas, THERE HAS BEEN PRESENTED TO THE

Secretary of Agriculture

An application requesting a certificate of protection for an alleged distinct variety of sexually reproduced, or tuber propagated plant, the name and description of which are contained in the application and exhibits, a copy of which is hereunto annexed and made a part hereof, and the various requirements of LAW in such cases made and provided have been complied with, and the title thereto is, from the records of the PLANT VARIETY PROTECTION OFFICE, in the applicant(s) indicated in the said copy, and Whereas, upon due examination made, the said applicant(s) is (are) adjudged to be entitled to a certificate of plant variety protection under the LAW.

Now, therefore, this certificate of plant variety protection is to grant unto the said applicant(s) and the successors, heirs or assigns of the said applicant(s) for the term of TWENTY years from the date of this grant, subject to the payment of the required fees and periodic replenishment of viable basic seed of the variety in a public repository as provided by LAW, the right to exclude others from selling the variety, or offering it for sale, or reproducing it, or importing it, or exporting it, or conditioning it for propagation, or stocking it for any of the above purposes, or using it in producing a hybrid or different variety therefrom, to the extent provided by the PLANT VARIETY PROTECTION ACT. IN THE UNITED STATES SEED OF THIS VARIETY (1) SHALL BE SOLD BY VARIETY NAME ONLY AS A CLASS OF CERTIFIED SEED AND (2) SHALL CONFORM TO THE NUMBER OF GENERATIONS SPECIFIED BY THE OWNER OF THE RIGHTS. (84 STAT. 1542, AS AMENDED, 7 U.S.C. 2321 ET SEQ.)

RAPE

‘Clearwater’

In Testimony Whereof, I have hereunto set my hand and caused the seal of the Plant Variety Protection Office to be affixed at the City of Washington, D.C. this twenty-fifth day of June, in the year two thousand and fourteen.

Attest:

Commissioner

Secretary of Agriculture
1. NAME OF OWNER
University of Idaho

2. TEMPORARY DESIGNATION OR EXPERIMENTAL NAME
IMI.SUN.56/UL.C.1.04

3. VARIETY NAME
Clearwater

4. ADDRESS (Street and No., or R.F.D. No., City, State, and ZIP Code, and Country)
Office of Technology Transfer
PO Box 443003

14. CROP KIND (Common Name)
Spring Canola

15. GENUS AND SPECIES NAME OF CROP
Brassica napus L.

16. FAMILY NAME (Botanical)
Brassicaceae

17. IS THE VARIETY A FIRST GENERATION HYBRID?  
[ ] YES  [X] NO

18. CHECK APPROPRIATE BOX FOR EACH ATTACHMENT SUBMITTED (Follow instructions on reverse)

   [ ] Exhibit A. Origin and Breeding History of the Variety
   [ ] Exhibit B. Statement of Distinctness
   [X] Exhibit C. Objective Description of Variety
   [ ] Exhibit D. Additional Description of the Variety (Optional)
   [ ] Exhibit E. Statement of the Basis of the Owner's Ownership
   [ ] Exhibit F. Declaration Regarding Deposit
   [ ] Voucher Sample (3,000 viable untreated seeds or, for tuber propagated varieties, verification that tissue culture will be deposited and maintained in an approved public repository)
   [ ] Filing and Examination Fee ($4,382), made payable to "Treasurer of the United States" (Mail to the Plant Variety Protection Office)

   Files received per plant (lab 1/16/2010)

20. DOES THE OWNER SPECIFY THAT SEED OF THIS VARIETY BE SOLD ONLY AS A CLASS OF CERTIFIED SEED? (See Section 83(a) of the Plant Variety Protection Act)
   [ ] YES  [X] NO
   (If "yes", answer items 21 and 22 below)  [ ] NO (If "no", go to item 23)  [ ] UNDECIDED

21. DOES THE OWNER SPECIFY THAT SEED OF THIS VARIETY BE LIMITED AS TO NUMBER OF GENERATIONS?  
[ ] YES  [X] NO

   IF YES, WHICH CLASSES?  
   [ ] FOUNDATION  [ ] REGISTERED  [X] CERTIFIED

22. DOES THE OWNER SPECIFY THAT SEED OF THIS VARIETY BE LIMITED AS TO NUMBER OF GENERATIONS?  
[ ] YES  [X] NO

   IF YES, SPECIFY THE NUMBER 1,2,3, etc. FOR EACH CLASS.

   [ ] FOUNDATION  [ ] REGISTERED  [X] CERTIFIED

23. HAS THE VARIETY (INCLUDING ANY HARVESTED MATERIAL) OR A HYBRID PRODUCED FROM THIS VARIETY BEEN SOLD, DISPOSED OF, TRANSFERRED, OR USED IN THE U.S. OR OTHER COUNTRIES?  
[ ] YES  [X] NO

   IF YES, YOU MUST PROVIDE THE DATE OF FIRST SALE, DISPOSITION, TRANSFER, OR USE FOR EACH COUNTRY AND THE CIRCUMSTANCES. (Please use space indicated on reverse.)

24. IS THE VARIETY OR ANY COMPONENT OF THE VARIETY PROTECTED BY INTELLECTUAL PROPERTY RIGHT (PLANT BREEDER'S RIGHT OR PATENT)?  
[ ] YES  [X] NO

   IF YES, PLEASE GIVE COUNTRY, DATE OF FILING OR ISSUANCE AND ASSIGNED REFERENCE NUMBER. (Please use space indicated on reverse.)

25. The undersigned owner(s) states that the variety has been furnished with application and will be deposited upon request in accordance with such regulations as may be applicable, or for a tuber propagated variety a tissue culture will be deposited in a public repository and maintained for the duration of the certificate.

The undersigned owner(s) states that the variety is new, distinct, uniform, and stable as required in Section 42, and is entitled to protection under the provisions of Section 42 of the Plant Variety Protection Act.

Owner(s) is (are) informed that false representation herein can jeopardize protection and result in penalties.

(See reverse for instructions and information collection burden statement)
GENERAL INSTRUCTIONS: To be effectively filed with the Plant Variety Protection Office (PVPO), ALL of the following items must be received in the PVPO:
(1) Completed application form signed by the owner; (2) completed exhibits A, B, C, E, F; (3) for a tuber reproduced variety, verification that a viable (in the sense that it will reproduce an entire plant) tissue culture will be deposited and maintained in an approved public repository; and (4) payment by credit card or check drawn on a U.S. Bank for $4,382 ($518 filing fee and $3,864 examination fee), payable to “Treasurer of the United States” (See Section 97.6 of the Regulations and Rules of Practice). NEW: With the application for a seed reproduced variety or by direct deposit soon after filing, the applicant must provide at least 3,000 viable untreated seeds of the variety per se, and for a hybrid variety at least 3,000 untreated seeds of each line necessary to reproduce the variety. Partial applications will be held in the PVPO for not more than 90 days; then returned to the applicant as un-filed. Mail application and other requirements to Plant Variety Protection Office, AMS, USDA, Room 401, NAL Building, 10301 Baltimore Avenue, Beltsville, MD 20705-2351. Retain one copy for your files. All items on the face of the application are self explanatory unless noted below. Corrections on the application form and exhibits must be initialed and dated. DO NOT use masking materials to make corrections. If a certificate is allowed, you will be requested to send a payment by credit card or check payable to “Treasurer of the United States” in the amount of $768 for issuance of the certificate. Certificates will be issued to owner, not licensee or agent.

NOTES: It is the responsibility of the applicant/owner to keep the PVPO informed of any changes of address or change of ownership or assignment or owner's representative during the life of the application/certificate. The fees for filing a change of address; owner's representative; ownership or assignment; or any modification of owner's name is specified in Section 97.175 of the regulations. (See Section 101 of the Act, and Sections 97.130, 97.131, 97.175(h) of the Regulations and Rules of Practice.)

Plant Variety Protection Office
Telephone: (301) 504-5518  FAX: (301) 504-5291
General E-mail: PVPOmail@usda.gov
Homepage: http://www.ams.usda.gov/science/pvpo/PVIndex.htm

SPECIFIC INSTRUCTIONS:
To avoid conflict with other variety names in use, the applicant must check the appropriate recognized authority and provide evidence that the permanent name of the application variety (even if it is a hybrid, inbred line) has been cleared by the appropriate recognized authority before the Certificate of Protection is issued. For example, for agricultural and vegetable crops, contact: U.S. Department of Agriculture, Agricultural Marketing Service, Livestock and Seed Programs, Seed Regulatory and Testing Branch, 801 Summit Crossing Place, Suite C, Gastonia, North Carolina 28054-2193 Telephone: (704) 810-8870.

ITEM

19a. Give: (1) the genealogy, including public and commercial varieties, lines, or clones used, and the breeding method; (2) the details of subsequent stages of selection and multiplication; (3) evidence of uniformity and stability; and (4) the type and frequency of variants during reproduction and multiplication and state how these variants may be identified.

19b. Give a summary of the variety's distinctness. Clearly state how this application variety may be distinguished from all other varieties in the same crop. If the new variety is most similar to one variety or a group of related varieties:
(1) identify these varieties and state all differences objectively;
(2) attach replicated statistical data for characters expressed numerically and demonstrate that these are clear differences; and
(3) submit, if helpful, seed and plant specimens or photographs (prints) of seed and plant comparisons which clearly indicate distinctness.

19c. Exhibit C forms are available from the PVPO Office for most crops; specify crop kind. Fill in Exhibit C (Objective Description of Variety) form as completely as possible to describe your variety.

19d. Optional additional characteristics and/or photographs. Describe any additional characteristics that cannot be accurately conveyed in Exhibit C. Use comparative varieties as is necessary to reveal more accurately the characteristics that are difficult to describe, such as plant habit, plant color, disease resistance, etc.

19e. Section 52(f) of the Act requires applicants to furnish a statement of the basis of the applicant's ownership. An Exhibit E form is available from the PVPO.

20. If "Yes" is specified (seed of this variety be sold by variety name only, as a class of certified seed), the applicant MAY NOT reverse this affirmative decision after the variety has been sold and so labeled, the decision published, or the certificate issued. However, if "No" has been specified, the applicant may change the choice. (See Regulations and Rules of Practice, Section 97.103).

23. See Sections 41, 42, and 43 of the Act and Section 97.5 of the regulations for eligibility requirements.

24. See Section 55 of the Act for instructions on claiming the benefit of an earlier filing date.

22. CONTINUED FROM FRONT (Please provide a statement as to the limitation and sequence of generations that may be certified.)

23. CONTINUED FROM FRONT (Please provide the date of first sale, disposition, transfer, or use for each country and the circumstances, if the variety (including any harvested material) or a hybrid produced from this variety has been sold, disposed of, transferred, or used in the U.S. or other countries.)

24. CONTINUED FROM FRONT (Please give the country, date of filing or issuance, and assigned reference number, if the variety or any component of the variety is protected by intellectual property right (Plant Breeder’s Right or Patent).)

According to the Paperwork Reduction Act of 1995, an agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a valid OMB control number. The valid OMB control number for this information collection is 0581-0055. The time required to complete this information collection is estimated to average 1.4 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or part of an individual's income is derived from any public assistance program (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD). To file a complaint of discrimination, write to USDA, Director, Office of Civil Rights, 1400 Independence Avenue, S.W., Washington, D.C. 20250-9410, or call (800) 795-3272 (voice) or (202) 720-6382 (TDD). USDA is an equal opportunity provider and employer.
‘Clearwater’
Spring Rapeseed
*Brassica napus* L.

Exhibit A: Origin and Breeding History

‘Clearwater’ spring rapeseed (*Brassica napus* L. spp. *oleifera* (Metzg) Sinsk. *f. annua*) was developed for use as an edible oil-quality (canola) cultivar by the Idaho Agricultural Experimental Station, Moscow, ID 83844. This cultivar is protected by U.S. Plant Variety Protection (PVP pending).

Clearwater is a near pure-line spring canola cultivar which has high resistance to imidazolinone class herbicides including imazamox (2-[4,5-dihydro-4-methyl-4-(1-methylethyl)-5-oxo-1H-imidazol-2-yl]-5-(methoxymethyl)-3-pyrindinecarboxylic acid). Clearwater produces canola-quality seed oil and canola-quality seed meal, and was selected for adaptability to environments throughout the Pacific Northwest Region (Idaho, Oregon, Washington, and Montana). This cultivar was developed from the cross ‘CFSN.39.9’/‘Sunrise’ which is a canola-quality spring rapeseed cultivar developed and released by the University of Idaho in 1997 (Brown et al., 1997).

Seed from the original cross CFSN.39.9/Sunrise was produced and F₁ progeny was planted in the glasshouse and backcrossed to Sunrise to produce BC₁F₁ seed. Fifty seeds of the BC₁F₁ seed were planted in seedling trays and grown in the glasshouse. When plants reached the 4-6 leaf stage (approximately three weeks later), they were sprayed with imazamox herbicide at a rate equivalent to 35 g a.i. ha⁻¹, along with non-ionic surfactant 2.5 ml l⁻¹ of solution liquid urea-ammonium sulfate fertilizer 15 ml l⁻¹ of solution. Seedlings that showed no visible herbicide damage symptoms were transplanted to larger pots and these plants were backcrossed to Sunrise to produce BC₂F₁ seed. The procedure of spraying seedlings with imazamox herbicide, identifying highly tolerant seedlings and using these to backcross to Sunrise was repeated a further three times to produce BC₅F₁ seed. Five hundred BC₅F₁ seed were planted into seedling trays and sprayed with imazamox herbicide at the above rate. Seedlings expressing high tolerance (156 lines) to the herbicide were selected and grown to maturity in large pots to produce BC₅F₂ seed.

BC₅F₂ seed harvested from the glasshouse was used to plant unreplicated single plant plots (15 m x 2 rows 15 cm apart) in the field.

Single plant plots were sprayed at the 4 leaf stage with imazamox herbicide at described...
above, and evaluated for herbicide tolerance along with morphological adaptability characters, seedling vigor, flower date, plant height, lodging and maturity. At maturity, seed from 26 single plant plots were selected for further evaluation. Ten single plants were harvested separately from each plot while the remainder of the plots was hand threshed and used for planting yield trials. The single BC5F3 plants harvested were planted as single plant plots and used to initiate seed increases.

Twenty six BC5F3 selected lines were evaluated in replicated yield trials at two locations in northern Idaho. Included in the trial were several commercially available spring canola cultivars. None of the yield evaluation trials were sprayed post emergence with imazamox herbicide. A range of morphological characters was recorded including seedling vigor, flower date, plant height, lodging and maturity. After harvest, a sample of seed was taken from each plot to determine oil content, fatty acid profile (Hammond, 1991; Christie, 1992) and glucosinolate content was estimated using a Test-tape® procedure (Smith & Donald, 1988). After reviewing the performance of the 26 BC5F3 selections in yield trials and as single plant plots, the line code IMLSUN.56 was selected, and 200 single plant selections from this BC5F4 family (later coded as UI.C.1) were harvested used to initial the seed source for the Clearwater cultivar.

A single seed from each of the 200 BC5F4 single plant selections from UI.C.1 was planted in the glasshouse. At the seedling stage, a leaf DNA extract was taken from each seedling and screened for the presence of both tolerance genes (PM1 and PM2). Seedlings that were homozygous for both tolerance alleles were grown to maturity, and the resulting seed was planted to initiate a pure seed source for increase in the field. At each stage of seed increase seedlings were sprayed at the 4 leaf stage with imazamox herbicide as described above, and plots showing any susceptibility symptoms were discarded. Breeders’ seed (UI.C.1.04) was produced in 2004 from 400 single plant selections made from the BC5F7 family. Foundation seed was produced from Breeders seed in 2005. Throughout the stages of Clearwater seed increases including pre-Breeders seed, Breeders seed, Foundation seed, and finally Certified seed production, plants were consistently uniform and stable, and no variants were observed over this four year period.

References

Exhibit B: Statement of Distinctness

Clearwater is most similar in plant appearance to the spring canola cultivar Sunrise (Brown et al., 1997). However, Clearwater is high tolerant/resistance to imidazolinone class herbicides including imazamox (2-[4,5-dihydro-4-methyl-4-(1-methylethyl)-5-oxo-1H-imidazol-2-yl]-5-(methoxymethyl)-3-pyridinecarboxylic acid) while Sunrise is highly susceptible to all imidazolinone class herbicides including imazamox. In field trials conducted at Moscow and Genesee in 2004 and 2005 Clearwater was grown in replicated field plots alongside Sunrise and seedlings sprayed with a 1X rate of Beyond® (imazamox) herbicide. Stand counts were conducted on a single 1 m row from each plot before and after spraying and %survival data are presented in Table B1.

Table B1. Percentage of Clearwater and Sunrise seedling that survival after seedlings had been sprayed with Beyond (imazamox) herbicide.

Select the number which characterizes the variety in the features above. 14. Those characteristics marked with an asterisk "***" should be recorded. Any others should be recorded if possible to help establish novelty or uniqueness. Characteristics described, including numerical measurements, should represent those that are typical for the variety. Give test area ______ conditions _______.
‘Clearwater’
Spring Rapeseed
Brassica napus L.

Exhibit D: Additional Description of Variety

Clearwater leaves have medium serration of the leaf margins, medium lobing and no clasping of leaves attached to the stem (Figure D1). Clearwater plants flower on average 58.8 days after planting, which is not significantly different from Sunrise but significantly later than the early flowering cultivar Hyola.401 (Table D1). Clearwater plants are significantly taller (127.8 cm) than Sunrise (118.9 cm) and Hyola.401 (106.7 cm). Clearwater plants reached full maturity on average 97 days after planting, which was not significantly different from Sunrise which reaches maturity, on average, 96 days after planting. Average 1000-seed weight of Clearwater is 3.4 g, which is similar to Sunrise at 3.3 g. Clearwater is resistant to lodging and slightly resistant to seed shatter at maturity.

Clearwater was grown in replicated yield trials alongside Sunrise and Hyola.401 at a total of 79 year-sites between 2001 and 2007. None of these yield evaluation trial had imazamox herbicide applied. Averaged over all years and sites, Clearwater seed yield was 1,748 kg ha⁻¹, compared to 1,646 kg ha⁻¹ for Sunrise and 1,986 kg ha⁻¹ for Hyola.401 (Table D2). Average seed yield of Clearwater was higher than Sunrise in each of the 6 years tested, albeit that the difference was only significant (P<0.05) in three of the six years.

Clearwater also was compared to the cultivar ‘45A71’ and selection ‘PM.2’ in yield trials at two locations in 2004 and 2005 where seedlings in the trials were sprayed with 0X, 2X (equivalent to 70 g a.i. ha⁻¹), and 3X (equivalent to 105 g a.i. ha⁻¹) rates of imazamox herbicide at the 4-5 leaf stage (Table D3). Averaged over years and sites, seed yield of Clearwater was almost identical with 0X herbicide rate (1,748 kg ha⁻¹) compared to 2X herbicide rate (1,730 kg ha⁻¹). Plant stand counts, plant height, days to flower start and seed oil content of Clearwater remained constant irrespective of imazamox herbicide application rates.

In a similar study conducted in 2004 and 2005 at two locations the performance of Clearwater was recorded when planted into soils previously treated with Pursuit® (Ammonium salt of imazethapyr (+)-2-[4,5-dihydro-4-methyl-4-(1-methylethyl)-5-oxo-1H-imidazol-2-yl]-5-ethyl-3-pyridinecarboxylic acid) at 0X, 0.5X (equivalent to 17.5 g a.i. ha⁻¹), 1X (equivalent to 35 g a.i. ha⁻¹) and 2X (equivalent to 70 g a.i. ha⁻¹) recommended application rates, and thereafter seedlings sprayed with imazamox at a 0X, 1X (equivalent to 35 g a.i. ha⁻¹), and 2X (equivalent to 70 g a.i. ha⁻¹) foliar application rate (Table D4). Imazethapyr and imazamox are both imidazoline class herbicides. Seed yield of Clearwater remained constant over all herbicide and non-herbicide treatments, except in Moscow in 2005, again stressing the high tolerance of Clearwater to imazamox herbicide residue in the soil and foliar applications of this herbicide.
Over the 70 year-sites of testing, oil content of Clearwater ranged from a high of 443 g kg\(^{-1}\) to a low of 361 g kg\(^{-1}\) (data not shown), and an average oil content of 391 g kg\(^{-1}\), which was not significantly different from either Sunrise or Hyola.401 (Table D5). Seed oil fatty acid composition of Clearwater was very similar to Sunrise, where the primary fat was oleic acid. Clearwater seed oil consistently contained less than 7 g kg\(^{-1}\) erucic acid, less than 80 g kg\(^{-1}\) linolenic acid and more than 620 g kg\(^{-1}\) oleic acid (Table D6). Total glucosinolate content of Clearwater seed meal was low (average of 9.1 µmol g\(^{-1}\) of defatted seed meal) (Table D7). Primary glucosinolate was 2-hydroxy-3-butenyl (average 5.7 µmol g\(^{-1}\)) followed by 3-butenyl (average 2.9 µmol g\(^{-1}\)).
Figure D1. Lower, Middle and upper leaves of Clearwater spring canola.

10. Is the applicant the original owner? [ ] YES [ ] NO If no, please answer one of the following:

   a. If the original rights to variety were owned by individual(s), is (are) the original owner(s) a U.S. National(s)? [ ] YES [ ] NO If no, give name of country

   b. If the original rights to variety were owned by a company(ies), is (are) the original owner(s) a U.S. based company? [ ] YES [ ] NO If no, give name of country

11. Additional explanation on ownership (Trace ownership from original breeder to current owner. Use the reverse for extra space if needed):

**PLEASE NOTE:**

Plant variety protection can only be afforded to the owners (not licensees) who meet the following criteria:

1. If the rights to the variety are owned by the original breeder, that person must be a U.S. national, national of a UPOV member country, or national of a country which affords similar protection to nationals of the U.S. for the same genus and species.

2. If the rights to the variety are owned by the company which employed the original breeder(s), the company must be U.S. based, owned by nationals of a UPOV member country, or owned by nationals of a country which affords similar protection to nationals of the U.S. for the same genus and species.

3. If the applicant is an owner who is not the original owner, both the original owner and the applicant must meet one of the above criteria.

The original breeder/owner may be the individual or company who directed the final breeding. See Section 41(a)(2) of the Plant Variety Protection Act for definitions.

According to the Paperwork Reduction Act of 1995, an agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a valid OMB control number. The valid OMB control number for this information collection is 0581-0055. The time required to complete this information collection is estimated to average 0.1 hour per response, including the time for reviewing the instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or part of an individual's income is derived from any public assistance program (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means for communication of program information (Braille, large print, audio tape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD).
