THE UNITED STATES OF AMERICA

TO ALL TO WHOM THESE PRESENTS SHALL COME:

Idaho Agricultural Experiment Station

Whereas, THERE HAS BEEN PRESENTED TO THE

Secretary of Agriculture

An application requesting a certificate of protection for an alleged distinct variety of sexually reproduced, or tuber propagated plant, the name and description of which are contained in the application and exhibits, a copy of which is hereunto annexed and made a part hereof, and the various requirements of LAW in such cases made and provided have been complied with, and the title thereto is, from the records of the PLANT VARIETY PROTECTION OFFICE, in the applicant(s) indicated in the said copy, and Whereas, upon due examination made, the said applicant(s) is (are) adjudged to be entitled to a certificate of plant variety protection under the LAW.

Now, therefore, this certificate of plant variety protection is to grant unto the said applicant(s) and the successors, heirs or assigns of the said applicant(s) for the term of TWENTY years from the date of this grant, subject to the payment of the required fees and periodic replenishment of viable basic seed of the variety in a public repository as provided by LAW, the right to exclude others from selling the variety, or offering it for sale, or reproducing it, or importing it, or exporting it, or conditioning it for propagation, or stocking it for any of the above purposes, or using it in producing a hybrid or different variety therefrom, to the extent provided by the PLANT VARIETY PROTECTION ACT. IN THE UNITED STATES SEED OF THIS VARIETY (1) SHALL BE SOLD BY VARIETY NAME ONLY AS A PRODUCT OF CERTIFIED SEED AND (2) SHALL CONFORM TO THE NUMBER OF SEEDS PER PACKAGES SPECIFIED BY THE OWNER OF THE RIGHTS. (84 STAT. 1542, AS AMENDED, 7 U.S.C. 2377 ET SEQ.)

MUSTARD, INDIA

'Pacific Gold'

In Testimony Whereof, I have hereunto set my hand and caused the seal of the Plant Variety Protection Office to be affixed at the City of Washington, D.C. this tenth day of December, in the year two thousand and ten.

Attest:

FILING AND EXAMINATION FEE
$3,652.00
DATE: 3/25/2003
CERTIFICATE FEE:
$768.00
DATE: 11/18/2010

20. DOES THE OWNER SPECIFY THAT SEED OF THIS VARIETY BE SOLD ONLY AS A CLASS OF CERTIFIED SEED? (See Section 83(a) of the Plant Variety Protection Act)
X YES □ NO
If YES, WHICH CLASSES? X FOUNDATION □ REGISTERED X CERTIFIED
21. DOES THE OWNER SPECIFY THAT SEED OF THIS VARIETY BE LIMITED AS TO NUMBER OF GENERATIONS?
X YES □ NO
If YES, SPECIFY THE NUMBER 1,2,3, etc. FOR EACH CLASS
22. IF YES, COMPLETE VARIOUS FIELDS OF CERTIFIED
X FOUNDATION □ REGISTERED X CERTIFIED
(If additional information is necessary, please use the space indicated on the reverse.)
23. HAS THE VARIETY (INCLUDING ANY HARVESTED MATERIAL) OR A HYBRID PRODUCED FROM THIS VARIETY BEEN SOLD, DISPOSED OF, TRANSFERRED, OR USED IN THE U. S. OR OTHER COUNTRIES?
X YES □ NO
If YES, YOU MUST PROVIDE THE DATE OF FIRST SALE, DISPOSITION, TRANSFER, OR USE FOR EACH COUNTRY AND THE CIRCUMSTANCES. (Please use space indicated on reverse.)
24. IS THE VARIETY OR ANY COMPONENT OF THE VARIETY PROTECTED BY INTELLECTUAL PROPERTY RIGHT (PLANT BREEDER'S RIGHT OR PATENT)?
X YES □ NO
If YES, PLEASE GIVE COUNTRY, DATE OF FILING OR ISSUANCE AND ASSIGNED REFERENCE NUMBER. (Please use space indicated on reverse.)

THE UNDERSIGNED OWNER(S) (please print or type) hereby declare(s) I/WE have completed the above application in strict compliance with the Plant Variety Protection Act and the regulations thereunder. The undersigned owner(s) hereby agree(s) to be bound by the terms and conditions of the Plant Variety Protection Act and the regulations thereunder. The undersigned owner(s) hereby consent(s) to the examination of my/our plant variety by authorized representatives of the United States Department of Agriculture to determine whether it is a variety as defined by the Act.

Date: 3/6/2003

SIGNATURE OF OWNER

CAPACITY OR TITLE
Professor/Plant breeder
ST-470 (07-01-2009) designed by the Plant Variety Protection Office
GENERAL INSTRUCTIONS: To be effectively filed with the Plant Variety Protection Office (PVPO), ALL of the following items must be received in the PVPO: (1) Completed application form signed by the owner; (2) completed exhibits A, B, C, E, F; (3) for a tuber reproduced variety, verification that a viable (in the sense that it will reproduce an entire plant) issue culture will be deposited and maintained in an approved public repository; and (4) payment by credit card or check drawn on a U.S. bank for $4,382 ($518 filing fee and $3,864 examination fee), payable to "Treasurer of the United States" (See Section 97.6 of the Regulations and Rules of Practice). NEW: With the application for a seed reproduced variety or by direct deposit soon after filing, the applicant must provide at least 3,000 viable untreated seeds of the variety per se, and for a hybrid variety at least 3,000 untreated seeds of each line necessary to reproduce the variety. Partial applications will be held in the PVPO for not more than 90 days; then returned to the applicant as un-filed. Mail application and other requirements to Plant Variety Protection Office, AMS, USDA, Room 401, NAL Building, 10301 Baltimore Avenue, Beltsville, MD 20705-2351. Retain one copy for your files. All items on the face of the application are self-explanatory unless noted below. Corrections on the application form and exhibits must be initialed and dated. DO NOT use masking materials to make corrections. If a certificate is allowed, you will be requested to send a payment by credit card or check payable to "Treasurer of the United States" in the amount of $758 for issuance of the certificate. Certificates will be issued to owner, not licensee or agent.

NOTES: It is the responsibility of the applicant/owner to keep the PVPO informed of any changes of address or change of ownership or assignment or owner's representative during the life of the application/certificate. The fees for filing a change of address, owner's representative, ownership or assignment; or any modification of owner's name is specified in Section 97.175 of the regulations. (See Section 101 of the Act, and Sections 97.130, 97.131, 97.175(h) of the Regulations and Rules of Practice.)

Plant Variety Protection Office
Telephone: (301) 504-5518 FAX: (301) 504-5291
General E-mail: PVPOmail@usda.gov
Homepage: http://www.ams.usda.gov/science/pvpo/PVPindex.htm

SPECIFIC INSTRUCTIONS:
To avoid conflict with other variety names in use, the applicant must check the appropriate recognized authority and provide evidence that the permanent name of the application variety (even if it is a parental, inbred line) has been cleared by the appropriate recognized authority before the Certificate of Protection is issued. For example, for agricultural and vegetable crops, contact: U.S. Department of Agriculture, Agricultural Marketing Service, Livestock and Seed Programs, Seed Regulatory and Testing Branch, 801 Summit Crossing Place, Suite C, Gastonia, North Carolina 28054-2193 Telephone: (704) 810-8870. http://www.ams.usda.gov/lgs/seed.htm.

ITEM
19a. Give: (1) the genealogy, including public and commercial varieties, lines, or clones used, and the breeding method;
(2) the details of subsequent stages of selection and multiplication;
(3) evidence of uniformity and stability; and
(4) the type and frequency of variants during reproduction and multiplication and state how these variants may be identified

19b. Give a summary of the variety's distinctness. Clearly state how this application variety may be distinguished from all other varieties in the same crop. If the new variety is most similar to one variety or a group of related varieties:
(1) identify these varieties and state all differences objectively;
(2) attach replicated statistical data for characters expressed numerically and demonstrate that these clear differences; and
submit, if helpful, seed and plant specimens or photographs (prints) of seed and plant comparisons which clearly indicate distinctness.

19c. Exhibit C forms are available from the PVPO Office for most crops; specify crop kind. Fill in Exhibit C (Objective Description of Variety) form as completely as possible to describe your variety.

19d. Optional additional characteristics and/or photographs. Describe any additional characteristics that cannot be accurately conveyed in Exhibit C. Use comparative varieties as is necessary to reveal more accurately the characteristics that are difficult to describe, such as plant habit, plant color, disease resistance, etc.

19e. Section 52(5) of the Act requires applicants to furnish a statement of the basis of the applicant's ownership. An Exhibit E form is available from the PVPO.

20. If "Yes" is specified (seed of this variety be sold by variety name only, as a class of certified seed), the applicant MAY NOT reverse this affirmative decision after the variety has been sold and so labeled, the decision published, or the certificate issued. However, if "No" has been specified, the applicant may change the choice. (See Regulations and Rules of Practice, Section 97.103).

23. See Sections 41, 42, and 43 of the Act and Section 97.5 of the regulations for eligibility requirements.

24. See Section 55 of the Act for instructions on claiming the benefit of an earlier filing date.

22. CONTINUED FROM FRONT (Please provide a statement as to the limitation and sequence of generations that may be certified.)

23. CONTINUED FROM FRONT (Please provide the date of first sale, disposition, transfer, or use for each country and the circumstances, if the variety (including any harvested material) or a hybrid produced from this variety has been sold, disposed of, transferred, or used in the U.S. or other countries.)

Amount of seed sold (9,000 lb) in June 2002 to determine export potential

24. CONTINUED FROM FRONT (Please give the country, date of filing or issuance, and assigned reference number, if the variety or any component of the variety is protected by intellectual property right (Plant Breeder's Right or Patent).)

According to the Paperwork Reduction Act of 1995, an agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a valid OMB control number. The valid OMB control number for this information collection is 0581-0025. The time required to complete this information collection is estimated to average 1.4 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information.

ST-473 (07-01-2009) designed by the Plant Variety Protection Office
Pacific Gold
Condiment India Mustard
(\textit{Brassica juncea} L.)

Exhibit A: Origin and Breeding History

Pacific Gold is a pure-line (near homozygous) condiment India mustard cultivar that was selected for high adaptability to dryland farming regions of northern Idaho and eastern Washington. This cultivar was developed from a single plant selection in 1993 from an F\textsubscript{4} population from the cross ‘Cutlass’/J.89.102. Cutlass is an India mustard cultivar developed by Agriculture and Agri-Food Canada, Saskatoon, SK. J.89.102 is an India condiment mustard accession from the University of Idaho germplasm collection which was identified as having high adaptability and yield potential to environmental conditions of northern Idaho.

F\textsubscript{1} seed from the original cross was produced in spring 1992 and the F\textsubscript{1} plant generation and F\textsubscript{2} plant generation was increased in a greenhouse in the fall of 1992 and spring of 1993, respectively. Bulked F\textsubscript{3} seed (derived by open pollination of 8 F\textsubscript{2} plants in a greenhouse) was grown in bulk progeny yield trials in 1994. At harvest, 20 single plants were selected from the bulk progeny and threshed separately to initiate seed increase and increase homozygosity. From the F\textsubscript{5} stage (1995) through to the F\textsubscript{8} stage (1998) a modified-pedigree-bulk breeding scheme (2) was used. At each evaluation stage, 20 single plant plots were planted for seed increase and bulk progeny were evaluated in replicated yield trials. Throughout the growing season, the single plant plots were visually inspected for uniformity and homogeneity. A further 20 single plants were selected from the “best” single plant plot. Thereafter, the remainder of the single plant plot was bulk harvested and hand threshed, and the seed used to plant the following year’s yield trials. This operation was repeated for three generations (F\textsubscript{5} to F\textsubscript{6}, F\textsubscript{6} to F\textsubscript{7}, and F\textsubscript{7} to F\textsubscript{8}).

In 1999, 400 single plant selections were made from the F\textsubscript{6} single plant multiplication plots and each plant threshed separately. The selections were made by visually inspecting each plant to have the same general plant morphology (i.e. same plant height, leaf shape, etc.) Over winter 1999-2000, two seeds from each plant were planted into 15 cm plots and grown to maturity in a greenhouse. Prior to flowering, each plant was bagged to minimize cross pollination. At harvest, each plant was harvested separately and evaluated for seed color. Seeds from plants with uniformly yellow/orange seed were retained and used to plant single plant plots in spring 2000. The growth characteristics of the single plant plots were monitored throughout the growing season to identify any variants. At harvest, all plots were harvested in bulk as Breeder’s seed. Foundation seed was planted from this Breeder’s seed stock in 2000 and used to plant Certified seed in 2001.

Pacific Gold has been observed in yield trial between 1996 and 2002, and since 1999, has been entered into the Pacific Northwest Mustard Variety Trials (1999 through 2010).
This cultivar also has been grown in a number of on-farm studies and was produced on over 2,000 acres in 2002 to produce sufficient seed to determine export potential to Pacific Rim countries. Throughout this period Pacific Gold has been found to be very stable and uniform in performance. Throughout the later stages of seed increases including pre-Breeders seed, Breeders seed, Foundation seed and Certified seed production no variants were observed over this four year period.
‘Pacific Gold’
Condiment India Mustard
(\textit{Brassica juncea} L.)

\textbf{Exhibit B: Statement of Distinctness}

Glucosinolate content in condiment mustard is directly related to pungency and a high pungency is required for a ‘hotter’ tasting product which is desired in Pacific Rim and other countries. High seed meal glucosinolate content (more correctly high allyl (2-propenyl) glucosinolate content) is a major quality characteristic of Indian condiment mustard cultivars.

Pacific Gold is most similar to the Indian condiment mustard cultivar ‘Cutlass’. Averaged over two locations in two years, allyl (2-propenyl) seed meal glucosinolate content of Pacific Gold seed is significantly higher (307.2 \, \mu\text{mol} \, \text{gram}^{-1} \text{ of defatted seed meal}) than Cutlass (213.7 \, \mu\text{mol} \, \text{gram}^{-1} \text{ of defatted seed meal}) (Table 1). The primary glucosinolate in Pacific Gold seed meal is 2-propenyl glucosinolate, accounting for over 99% of the total glucosinolate content (Table 2).
Table 1. 2-propenyl glucosinolate of defatted seed meal from Pacific Gold and Cutlass grown at Moscow, Idaho and Genesee, Idaho, planted in 2003 and 2004.

16. COMMENTS (Please give any additional comments which characterizes the variety)

Pacific Gold is the first Indian mustard (B. juncea) PVP application in the USA. The major distinguishing characteristic of this cultivar is high seed meal glucosinolate (mainly allyl glucosinolate) content in the seed meal which gives Pacific Gold a quality advantage over other cultivars.

17. DIRECTIONS

Select the number which characterizes the variety in the features above. Those characteristics marked with an asterisk ** should be recorded. Any others should be recorded if possible to help establish novelty or uniqueness. Characteristics described, including numerical measurements, should represent those that are typical for the variety. Give test area and conditions.

(Brassica juncea L.)

Exhibit D: Additional Description of Variety

Pacific Gold seedlings have small-medium size cotyledons and a semi-upright seedling growth habit at the rosette stage. Leaves are light-mid green in color with very slight glaucosity. Leaves are pointed and leaf margins have a strong serration. Fully developed leaves have moderate to strong lobing, and leaf attachment to the main stem shows no clasping (Figure 1). Flower buds appear at the tip of the apical meristem (Figure 1). Flowers open medium-early (54 days after planting). Petals are bright yellow, and anther dotting is absent. Bilateral single pods (siliques) are semi-erect to erect. Pod length and width is short-medium (37.8 mm long and 4.1 mm wide) with long pedicel length (13.5 mm) and short pod beak (8.48 mm). Pods contain a low number (16.12 seeds pod⁻¹) of bright yellow/orange seeds.

Plants of Pacific Gold emerge quickly after planting and crop establishment is rapid. Pacific Gold plants reached 50% bloom on average 54 days after planting. After flower end, Pacific Gold plants were 150 cm tall. Pacific Gold is highly resistant to lodging and seed shatter at maturity. Plants are mature on average 105 days after planting. Pacific Gold seeds were 2.602 g 1000 seed weight⁻¹ and contained 350 g kg⁻¹ oil. Pacific Gold is moderately resistant to cabbage flea beetle (Phyllostreta cruciferae (Phyllostreta cruciferae (Goeze) (Coleoptera: Chrysomelidae)) and cabbage seedpod weevil (Ceutorhynchus assimilis Paykull), and diamondback moth (Plutella xylostella L.).

Pacific Gold was evaluated in replicated field trials grown throughout the dryland agricultural regions of northern Idaho, eastern Washington, and eastern Oregon between 1996 and 2002, and since PVP submission has continued to be evaluated throughout the inland northwest region in the Pacific Northwest Mustard Variety Trials from 2003 to 2010. Pacific Gold is the first condiment India mustard cultivar (Brassica juncea L.) to be developed for the Pacific Northwest region and no local cultivars are available for comparison. Pacific Gold is also the first India mustard cultivar to apply for PVP protection in the USA. Performance of Pacific Gold was compared to the Canadian cultivar Cutlass. Cutlass has not been grown commercially in the Pacific Northwest region of the USA. However, this cultivar represents the majority of the Canadian India mustard acreage and is predominant in this mustard class worldwide.

Seed yield potential of Pacific Gold in the inland Pacific Northwest region is excellent. In field trials between 1996 and 2002, Pacific Gold average seed yield over 38 sites/years was 1,974 kg ha⁻¹, which was significantly higher than Cutlass (1,795 kg ha⁻¹) (Table 6a). Seed yield of Pacific Gold since 2002 continued to be exceptional. When compared at 70
year/sites between 2003 and 2010 Pacific Gold seed yield was 1,802 kg ha\(^{-1}\), which was significantly higher than that for Cutlass (1,559 kg ha\(^{-1}\)).

**EXHIBIT E**

**STATEMENT OF THE BASIS OF OWNERSHIP**

1. **NAME OF APPLICANT(S)**
   
   Idaho Agricultural Experiment Station

2. **TEMPORARY DESIGNATION OR EXPERIMENTAL NUMBER**
   
   UI.BJ.18.Y.11

3. **VARIETY NAME**
   
   Pacific Gold

4. **ADDRESS (Street and No., or R.F.D. No., City, State, and ZIP, and Country)**
   
   University of Idaho
   Moscow, Idaho 83844-2339

5. **TELEPHONE (Include area code)**
   
   (208) 885-7173

6. **FAX (Include area code)**
   
   (208) 885-6654

7. **PVPO NUMBER**
   
   200300202

8. **Does the applicant own all rights to the variety?**
   Mark an "X" in the appropriate block. If no, please explain.
   
   [ ] YES  [ ] NO

9. **Is the applicant (individual or company) a U.S. national or a U.S. based company?**
   If no, give name of country.
   
   [ ] YES  [ ] NO

10. **Is the applicant the original owner?**
    [ ] YES  [ ] NO
    If no, please answer one of the following:

   a. **If the original rights to variety were owned by individual(s), is (are) the original owner(s) a U.S. National(s)?**
      
      [ ] YES  [ ] NO
      If no, give name of country

   b. **If the original rights to variety were owned by a company(ies), is (are) the original owner(s) a U.S. based company?**
      
      [ ] YES  [ ] NO
      If no, give name of country

11. **Additional explanation on ownership (Trace ownership from original breeder to current owner. Use the reverse for extra space if needed):**
    
    This cultivar was developed entirely at the University of Idaho.

**PLEASE NOTE:**

Plant variety protection can only be afforded to the owners (not licensees) who meet the following criteria:

1. If the rights to the variety are owned by the original breeder, that person must be a U.S. national, national of a UPOV member country, or national of a country which affords similar protection to nationals of the U.S. for the same genus and species.

2. If the rights to the variety are owned by the company which employed the original breeder(s), the company must be U.S. based, owned by nationals of a UPOV member country, or owned by nationals of a country which affords similar protection to nationals of the U.S. for the same genus and species.

3. If the applicant is an owner who is not the original owner, both the original owner and the applicant must meet one of the above criteria.

The original breeder/owner may be the individual or company who directed the final breeding. See Section 41(a)(2) of the Plant Variety Protection Act for definitions.
