

Appendix B. Aerial radiotelemetry antenna deployments at sites in the main stem Columbia and Snake rivers, and in tributaries

These maps show approximate locations of aerial antenna that were used to monitor radio-tagged adult salmon and steelhead in the main stem Columbia and Snake rivers and in major tributaries. Not all sites were deployed in all years. Please see the database: **Receiver_Deployments_1996-2014** for annual details. **Appendix A** provides generalized maps of aerial and underwater antennas at FCRPS dams. **Appendices C-E** provide additional metadata, including photos, for some sites at dams, in the main stem rivers, and in tributaries.

Table B1. Summary of receivers deployed at Columbia and Snake River main stem locations other than dams (black text) and in tributaries (blue text).
