SEED GROWING ASSIGNMENT

Your assignment is to grow 3 different sizes of annual seeds in 3 separate containers:
• very small seed (ex.: lettuce, carrot, poppy seed)
• medium sized seed (ex.: beet, pepper, radish)
• large seed (ex.: corn, bean, pea)

Label the containers with the plant name and the planting date. Use whatever medium and technique you think will work to sprout and grow your seeds the fastest. Turn your seedlings in after they have grown to 3-4 inches.

You can turn in whatever plants are ready; you do not have to wait for all three types to be up and growing. Aim for completion date in April or May.
